1 ICON Namelists

1.1 Scripts, Namelist files and Programs

Run scripts starting the programs for the grid generation and the models are stored in run/. These scripts write namelist files containing the specified Fortran namelists. Programs are stored in < icon home>/build/<architecture>/bin/.

Table 1: Namelist files

| Namelist file | Purpose | Made by script | Used by program |
|------------------|---------------------|-----------------------------|--|
| NAMELIST_GRAPH | Generate graphs | $create_global_grids.run$ | grid_command |
| NAMELIST_GRID | Generate grids | $create_global_grids.run$ | $\operatorname{grid} \operatorname{_command}$ |
| NAMELIST_GRIDREF | Gen. nested domains | create_global_grids.run | $grid_command$ |
| NAMELIST_ICON | Run ICON models | exp. <name>.run</name> | $control_model$ |

1.2 Namelist parameters

The following subsections tabulate all available Fortran namelist parameters by name, type, default value, unit, description, and scope:

- Type refers to the type of the Fortran variable, in which the value is stored: I=INTEGER, L=LOGICAL, R=REAL, C=character string
- Default is the preset value, if defined, that is assigned to this parameter within the programs.
- ullet Unit shows the unit of the control parameter, where applicable.
- Description explains in a few words the purpose of the parameter.
- Scope explains under which conditions the namelist parameter has any effect, if its scope is restricted to specific settings of other namelist parameters.

Information on the file, where the namelist is defined and used, is given at the end of each table.

2 Namelist parameters for grid generation

2.1 Namelist parameters defining the atmosphere grid

2.1.1 graph ini (NAMELIST GRAPH)

| Parameter | Type | Default | Unit | Description | Scope |
|------------------------------|------|---------|------|--|-------|
| nroot | I | 2 | | root subdivision of initial edges | |
| grid levels | I | 4 | | number of edge bisections following the root | |
| _ | | | | subdivision | |
| lplane | L | .FALSE. | | switch for generating a double periodic planar grid. | |
| | | | | The root level consists of 8 triangles. | |

Defined and used in: src/grid_generator/mo_io_graph.f90

2.1.2 grid ini (NAMELIST GRID)

| Parameter | Type | Default | Unit | Description | Scope |
|---|------|---------|------|---|-------|
| nroot | I | 2 | | root subdivision of initial edges | |
| grid levels | I | 4 | | number of edge bisections following the root | |
| _ | | | | subdivision | |
| lplane | L | .FALSE. | | switch for generating planar grid. The root level | |
| | | | | consists of 8 triangles. | |
| lread graph | L | .FALSE. | | switch for reading graph information from | |
| _ | | | | precomputed file; .TRUE. implies that the graph | |
| | | | | generator needs to be executed in advance | |

Defined and used in: src/grid_generator/mo_grid_levels.f90

${\bf 2.1.3 \quad grid_options} \ ({\bf NAMELIST_GRID})$

| Parameter | Type | Default | Unit | Description | Scope |
|---------------------------|------|---------|------|--|--------------------------|
| x_rot_angle | R | 0.0 | deg | Rotation of the icosahedron about the x-axis | |
| | | | | (connecting the origin and [0°E, 0°N]) | |
| y_rot_angle | R | 0.0 | deg | Rotation of the icosahedron about the y-axis | |
| | | | | (connecting the origin and [90°E, 0°N), done after | |
| | | | | the rotation about the x-axis. | |
| ${f z}_{f rot}_{f angle}$ | R | 0.0 | deg | rotation of the icosahedron about the z-axis | |
| | | | | (connecting the origin and [0°E, 90°N), done after | |
| | | | | the rotation about the y-axis. | |
| $itype_optimize$ | I | 4 | | Grid optimization type | |
| | | | | 0: no optimization | |
| | | | | 1: Heikes Randall | |
| | | | | 2: equal area | |
| | | | | 3: c-grid small circle | |
| | | | | 4: spring dynamics | |
| l_c_grid | L | .FALSE. | | C-grid constraint on last level | |
| $maxlev_optim$ | I | 100 | | Maximum grid level where the optimization is | i_type_optimize = 1 or 4 |
| | | | | applied | |
| beta_spring | R | 0.90 | | tuning factor for target grid length | i_type_optimize = 4 |

Defined and used in: src/grid_generator/mo_grid_levels.f90

2.1.4 plane options (NAMELIST GRID)

| Parameter | Type | Default | Unit | Description | Scope |
|-------------|------|---------|------|----------------------------------|---------------|
| tria_arc_km | R | 10.0 | km | length of triangle edge on plane | lplane=.TRUE. |

The number of grid points is generated by root level section and further bisections. The double periodic root level consists of 8 triangles. The spatial coordinates are -1 <= x <= 1, and $-\sqrt{3}/2 <= y <= \sqrt{3}/2$. Currently the planar option can only be used as an f-plane. Defined and used in: $src/grid_generator/mo_grid_levels.f90$

2.1.5 gridref_ini (NAMELIST_GRIDREF)

| Parameter | Type | Default | Unit | Description | Scope |
|--|-----------|---------|------|--|---------------|
| $\operatorname{grid}\operatorname{_root}$ | I | 2 | | root subdivision of initial edges | |
| start _lev | I | 4 | | number of edge bisections following the root | |
| | | | | subdivision | |
| n_{dom} | I | 2 | | number of logical model domains, including the | |
| | | | | global one | |
| n_{phys_dom} | I | n_dom | | number of physical model domains, may be larger | |
| | | | | than n_dom (in this case, domain merging is | |
| | | | | applied) | |
| $\operatorname{parent_id}$ | I(n_phys_ | i | | ID of parent domain (first entry refers to first | |
| | dom-1) | | | nested domain; needs to be specified only in case of | |
| | | | | more than one nested domain per grid level) | |
| logical_id | I(n_phys_ | i+1 | | logical grid ID of domain (first entry refers to first | |
| | dom-1 | | | nested domain; needs to be specified only in case of | |
| | | | | domain merging, i.e. n_dom < n_phys_dom) | |
| l_plot | L | .FALSE. | | produces GMT plots showing the locations of the | |
| | | | | nested domains | |
| l_circ | L | .FALSE. | | Create circular (.T.) or rectangular (.F.) refined | |
| | | | | domains | |
| l_rotate | L | .FALSE. | | Rotates center point into the equator in case of | lcirc=.FALSE. |
| | | | | $l_circ = .FALSE.$ | |

| Parameter | Type | Default | Unit | Description | Scope |
|--------------------|----------|---------|--------|---|---------------|
| write_hierarchy | I | 1 | | 0: Output only computational grids | |
| | | | | 1: Output in addition parent grid of global model | |
| | | | | domain (required for computing physics on a | |
| | | | | reduced grid) | |
| | | | | 2: Output all grids back to level 0 (required for | |
| | | | | hierarchical search algorithms) | |
| lsep_gridref_info | L | .FALSE. | | .TRUE.: write fields describing parent-child | |
| | | | | connectivities into separate grid files | |
| uuid_sourcefile | C(n_dom) | 'EMPTY' | | If specified, provides the names of existing grid files | |
| | | | | from which the uuid shall be copied. If a radiation | |
| | | | | grid is present, the first entry refers to this grid. | |
| bdy_indexing_depth | I | 12 | | Number of cell rows along the lateral boundary of a | |
| | | | | model domain for which the refin_ctrl fields | |
| | | | | contain the distance from the lateral boundary; | |
| | | | | needs to be enlarged when lateral boundary | |
| | | | | nudging is required for one-way nesting | |
| radius | R(n_dom- | 30. | \deg | radius of nested domain (first entry refers to first | lcirc=.TRUE. |
| | 1) | | | nested domain; needs to be specified for each nested | |
| | | | | domain separately) | |
| $hwidth_lon$ | R(n_dom- | 20. | \deg | zonal half-width of refined domain (first entry refers | lcirc=.FALSE. |
| | 1) | | | to first nested domain; needs to be specified for | |
| | | | | each nested domain separately) | |
| hwidth_lat | R(n_dom- | 20. | deg | meridional half-width of refined domain (first entry | lcirc=.FALSE. |
| | 1) | | | refers to first nested domain; needs to be specified | |
| _ | | | _ | for each nested domain separately) | |
| center_lon | R(n_dom- | 30. | deg | center longitude of refined domain (first entry refers | |
| | 1) | | | to first nested domain; needs to be specified for | |
| _ | | | | each nested domain separately) | |
| center_lat | R(n_dom- | 90. | deg | center latitude of refined domain (first entry refers | |
| | 1) | | | to first nested domain; needs to be specified for | |
| | | | | each nested domain separately) | |

Defined and used in: src/grid_generator/mo_gridrefinement.f90

2.1.6 gridref_metadata (NAMELIST_GRIDREF)

| Parameter | Type | Default | Unit | Description | Scope |
|---------------------|----------|---------|------|--|-------|
| number_of_grid_used | I(n_dom+ | 0 | | sets the number of grid used in the netcdf header; | |
| | 1) | | | the number of entries must be n_dom+1 since the | |
| | | | | first number refers to the radiation grid | |
| centre | I | 0 | | centre running the grid generator | |
| | | | | 78: EDZW (DWD) | |
| | | | | 252: MPIM | |
| subcentre | I | 0 | | subcentre to be assigned by centre, usually 0 | |
| outname_style | I | 1 | | Output name style | |
| | | | | 1: Standard: $iconRXBXX_DOMXX.nc$ | |
| | | | | 2: DWD: $icon_grid_XXXX_RXXBXX_X.nc$ | |

Defined and used in: src/grid_generator/mo_gridrefinement.f90

$2.2 \quad coupling_mode_nml$

| Parameter | Type | Default | Unit | Description | Scope |
|--------------|------|---------|------|--|-------|
| coupled_mode | L | .FALSE. | | .TRUE.: if yac coupling routines have to be called | |

Defined and used in: src/namelists/mo_coupling_nml.f90

3 Namelist parameters defining the atmospheric model

Namelist parameters for the ICON models are organized in several thematic Fortran namelists controling the experiment, and the properties of dynamics, transport, physics etc.

3.1 diffusion nml

| Parameter | Type | Default | Unit | Description | Scope |
|---------------------|------|---------|------|------------------------------------|-------|
| ${ m lhdiff_temp}$ | L | .TRUE. | | Diffusion on the temperature field | |

| Parameter | Type | Default | Unit | Description | Scope |
|-----------------------|------|-----------|------|---|--|
| lhdiff vn | L | .TRUE. | | Diffusion on the horizontal wind field | |
| $lhdiff_{\mathbf{w}}$ | L | .TRUE. | | Diffusion on the vertical wind field | |
| hdiff_order | I | 4 (hydro) | | Order of ∇ operator for diffusion: | Options 2, 24 and 42 are |
| | | 5 (NH) | | -1: no diffusion | allowed only in the |
| | | | | 2: ∇^2 diffusion | hydrostatic atm model |
| | | | | 3: Smagorinsky ∇^2 diffusion | (iequations $= 1 \text{ or } 2 \text{ in}$ |
| | | | | 4: ∇^4 diffusion | dynamics_nml). |
| | | | | 5: Smagorinsky ∇^2 diffusion combined with ∇^4 | |
| | | | | background diffusion as specified via | |
| | | | | hdiff_efdt_ratio | |
| | | | | 24 or 42: $\nabla 2$ diffusion from model top to a certain | |
| | | | | level (cf. k2_pres_max and k2_klev_max below); | |
| | | | | ∇^4 for the lower levels. | |
| lsmag_3d | L | .FALSE. | | .TRUE.: Use 3D Smagorinsky formulation for | hdiff_order=3 or 5; |
| | | | | computing the horizontal diffusion coefficient | itype_vn_diffu=1 |
| | | | | (recommended at mesh sizes finer than 1 km if the | |
| | | | | LES turbulence scheme is not used) | |
| itype_vn_diffu | I | 1 | | Reconstruction method used for Smagorinsky | iequations=3, |
| | | | | diffusion: | hdiff_order=3 or 5 |
| | | | | 1: u/v reconstruction at vertices only | |
| | | | | 2: u/v reconstruction at cells and vertices | |
| itype_t_diffu | I | 2 | | Discretization of temperature diffusion: | iequations=3, |
| | | | | 1: $K_h \nabla^2 T$ | hdiff_order=3 or 5 |
| | _ | | _ | $2: \nabla \cdot (K_h \nabla T)$ | |
| k2_pres_max | R | -99. | Pa | Pressure level above which ∇^2 diffusion is applied. | $hdiff_order = 24 \text{ or } 42,$ |
| | | | | | and |
| | | | | | dynamics_nml:iequations |
| 10.11 | _ | | | | = 1 or 2. |
| k2_klev_max | I | 0 | | Index of the vertical level till which (from the model ∇^2) if ∇^2 is ∇^2 . | $hdiff_order = 24 \text{ or } 42,$ |
| | | | | top) ∇^2 diffusion is applied. If a positive value is | and |
| | | | | specified for k2_pres_max, k2_klev_max is reset | dynamics_nml:iequations |
| | | | | accordingly during the initialization of a model run. | = 1 or 2. |

| Parameter | Type | Default | Unit | Description | Scope |
|----------------------|------|---------|------|--|--------------------|
| hdiff_efdt_ratio | R | 1.0 | | ratio of e-folding time to time step (or 2* time step | |
| | | (hydro) | | when using a 3 time level time stepping scheme) | |
| | | 36.0 | | (for triangular NH model, values above 30 are | |
| | | (NH) | | recommended when using hdiff_order=5) | |
| hdiff_w_efdt_ratio | R | 15.0 | | ratio of e-folding time to time step for diffusion on vertical wind speed | iequations=3 |
| hdiff min efdt ratio | R | 1.0 | | minimum value of hdiff efdt ratio near model top | iequations=3 .AND. |
| | | | | | hdiff order=4 |
| hdiff_tv_ratio | R | 1.0 | | Ratio of diffusion coefficients for temperature and normal wind: $T: v_n$ | _ |
| hdiff_multfac | R | 1.0 | | Multiplication factor of normalized diffusion coefficient for nested domains | n_dom>1 |
| hdiff smag fac | R | 0.15 | | Scaling factor for Smagorinsky diffusion | iequations=3 |
| | | (hydro) | | | |
| | | 0.015 | | | |
| | | (NH) | | | |

Defined and used in: src/namelists/mo_diffusion_nml.f90

3.2 dynamics_nml

This namelist is relevant if run_nml:ldynamics=.TRUE.

| Parameter | Type | Default | Unit | Description | Scope |
|----------------|------|---------|------|---|-------|
| iequations | I | 3 | | Equations and prognostic variables. Use positive | |
| | | | | indices for the atmosphere and negative indices for | |
| | | | | the ocean. | |
| | | | | 0: shallow water model | |
| | | | | 1: hydrostatic atmosphere, T | |
| | | | | 2: hydrostatic atm., θ -dp | |
| | | | | 3: non-hydrostatic atmosphere | |
| | | | | -1: hydrostatic ocean | |
| $idiv_method$ | I | 1 | | Method for divergence computation: | |

| Parameter | Type | Default | Unit | Description | Scope |
|----------------|------|----------|------|--|------------------|
| | | | | 1: Standard Gaussian integral. | |
| | | | | Hydrostatic atm. model: for unaveraged normal | |
| | | | | components | |
| | | | | Non-hydrostatic atm. model: for averaged normal | |
| | | | | components | |
| | | | | 2: bilinear averaging of divergence | |
| divavg_cntrwgt | R | 0.5 | | Weight of central cell for divergence averaging | $idiv_method=2$ |
| lcoriolis | L | .TRUE. | | Coriolis force | |
| sw_ref_height | R | 0.9* | m | Reference height of shallow water model used for | |
| | | 2.94e4/g | | linearization in the semi-implicit time stepping | |
| | | | | scheme | |

Defined and used in: src/namelists/mo_dynamics_nml.f90

3.3 echam_conv_nml

| Parameter | Type | Default | Unit | Description | Scope |
|-----------|------|---------|------|--|--------------------------------------|
| iconv | I | 1 | | Choice of cumulus convection scheme. | iforcing = 2 .AND. $lconv$ |
| | | | | 1: Nordeng scheme | = .TRUE. |
| | | | | 2: Tiedtke scheme | |
| | | | | 3: hybrid scheme | |
| ncvmicro | I | 0 | | Choice of convective microphysics scheme. | iforcing = 2 .AND. lconv = .TRUE. |
| lmfpen | L | .TRUE. | | Switch on penetrative convection. | iforcing = 2 .AND. lconv = .TRUE. |
| lmfmid | L | .TRUE. | | Switch on midlevel convection. | iforcing = 2 .AND. $lconv = .TRUE$. |
| lmfdd | L | .TRUE. | | Switch on cumulus downdraft. | iforcing = 2 .AND. lconv = .TRUE. |
| lmfdudv | L | .TRUE. | | Switch on cumulus friction. | iforcing = 2 .AND. lconv = .TRUE. |
| cmftau | R | 10800. | | Characteristic convective adjustment time scale. | iforcing = 2 .AND. lconv = .TRUE. |

| Parameter | Type | Default | Unit | Description | Scope |
|-----------|------|---------|------|---|----------------------------|
| cmfctop | R | 0.3 | | Fractional convective mass flux (valid range [0,1]) | iforcing = 2 .AND. $lconv$ |
| | | | | across the top of cloud | = .TRUE. |
| cprcon | R | 1.0e-4 | | Coefficient for determining conversion from cloud | iforcing = 2 .AND. $lconv$ |
| | | | | water to rain. | = .TRUE. |
| cminbuoy | R | 0.025 | | Minimum excess buoyancy. | iforcing = 2 .AND. $lconv$ |
| | | | | | = .TRUE. |
| entrpen | R | 1.0e-4 | | Entrainment rate for penetrative convection. | iforcing = 2 .AND. $lconv$ |
| | | | | | = .TRUE. |
| dlev | R | 3.e4 | Pa | Critical thickness necessary for the onset of | iforcing = 2 .AND. $lconv$ |
| | | | | convective precipitation. | = .TRUE. |

Defined and used in: src/namelists/mo_echam_conv_nml.f90

3.4 echam_phy_nml

| Parameter | Type | Default | Unit | Description | Scope |
|----------------|------|---------|------|---|-------------------------|
| lrad | L | .TRUE. | | .TRUE. for radiation. | $run_nml/iforcing = 2$ |
| ${ m dt_rad}$ | R | 3600. | s | time interval for radiative transfer computation | $run_nml/iforcing = 2$ |
| lvdiff | L | .TRUE. | | .TRUE. for vertical turbulent diffusion | $run_nml/iforcing = 2$ |
| lconv | L | .TRUE. | | .TRUE. for cumulus convection | $run_nml/iforcing = 2$ |
| lcond | L | .TRUE. | | .TRUE. for large scale condensation | $run_nml/iforcing = 2$ |
| lgw_hines | L | .TRUE. | | .TRUE. for non-orographic gravity wave drag | $run_nml/iforcing = 2$ |
| _ | | | | (Hines) | |
| lssodrag | L | .TRUE. | | .TRUE. for subgrid scale orographic effects (Lott | $run_nml/iforcing = 2$ |
| | | | | and Miller) | |
| lice | L | .FALSE. | | .TRUE. for sea-ice temperature calculation | $run_nml/iforcing = 2$ |
| lmlo | L | .FALSE. | | .TRUE. for mixed layer ocean | $run_nml/iforcing = 2$ |
| ljsbach | L | .FALSE. | | .TRUE. for calculating land surface properties | $run_nml/iforcing = 2$ |
| | | | | (JSBACH) | |
| lamip | L | .FALSE. | | .TRUE. for AMIP boundary conditions | $run_nml/iforcing = 2$ |

Defined and used in: src/namelists/mo_echam_phy_nml.f90

$3.5 \quad ensemble_pert_nml$

| Parameter | Type | Default | Unit | Description | Scope |
|-------------------|------|---------|------|---|---------------------------------|
| use_ensemble_pert | L | .FALSE. | | Main switch to activate physics parameter perturbations for ensemble forecasts / ensemble data assimilation; the perturbations are applied via random numbers depending on the perturbationNumber (ensemble member ID) specified in gribout_nml | $ run_nml:iforcing = inwp $ |
| range_gkwake | R | 0.333 | | Variability range for low level wake drag constant | |
| range_gkdrag | R | 0.04 | | Variability range for orographic gravity wave drag constant | |

| Parameter | Type | Default | Unit | Description | Scope |
|---------------------|------|---------|------|--|---|
| range_gfluxlaun | R | 0.75e-3 | | Variability range for non-orographic gravity wave | |
| | | | | launch momentum flux | |
| range_zvz0i | R | 0.2 | m/s | Variability range for terminal fall velocity of ice | $inwp_gscp = 1 \text{ or } 2$ |
| range_entrorg | R | 0.2e-3 | 1/m | Variability range for entrainment parameter in convection scheme | $inwp_convection = 1$ |
| range_capdcfac_et | R | 0.75 | | Maximum fraction of CAPE diurnal cycle correction applied in the extratropics | icapdeycl = 3 |
| range_rhebc | R | 0.05 | | Variability range for RH threshold for the onset of evaporation below cloud base | $inwp_convection = 1$ |
| range_texc | R | 0.05 | K | Variability range for temperature excess value in test parcel ascent | $inwp_convection = 1$ |
| range_box_liq | R | 0.01 | | Variability range for box width scale of liquid clouds in cloud cover scheme | $inwp_cldcover = 1$ |
| range_tkhmin | R | 0.2 | | Variability range for minimum vertical diffusion for heat/moisture | $inwp_turb = 1$ |
| range_tkmmin | R | 0.2 | | Variability range for minimum vertical diffusion for momentum | $inwp_turb = 1$ |
| $range_tkred_sfc$ | R | 4.0 | | Range for multiplicative change of reduction of minimum diffusion coefficients near the surface | $inwp_turb = 1$ |
| range_rlam_heat | R | 3.0 | | Variability range (multiplicative!) of laminar transport resistance parameter | $inwp_turb = 1$ |

May contain the keywords <path> which will be substituted by model_base_dir, as well as nroot, jlev, and idom defining the current patch.</path></idom></jlev></nroot></path> | init_mode=2 |
| ${\bf dwdfg_filename}$ | С | | | Filename of DWD first-guess input file, default " <path>dwdFG_R<nroot>B<jlev>_DOM <idom>.nc". May contain the keywords <path> which will be substituted by model_base_dir, as well as nroot, jlev, and idom defining the current patch.</path></idom></jlev></nroot></path> | init_mode=1,3,5,6 |

| Parameter | Type | Default | Unit | Description | Scope |
|-----------------------|------|----------------|------|---|-------------------|
| dwdana_filename | С | | | Filename of DWD analysis input file, default " <path>dwdana_R<nroot>B<jlev>_DOM <idom>.nc". May contain the keywords <path> which will be substituted by model_base_dir, as well as nroot, jlev, and idom defining the current patch.</path></idom></jlev></nroot></path> | init_mode=1,3,5,6 |
| filetype | I | -1 (undef.) | | One of CDI's FILETYPE_XXX constants. Possible values: 2 (=FILETYPE_GRB2), 4 (=FILETYPE_NC2). If this parameter has not been set, we try to determine the file type by its extension "*.grb*" or ".nc". | |
| ana_varlist | C(:) | | | List of mandatory analysis fields for the global domain that must be present in the analysis file. If these fields are not found, the model aborts. For all other analysis fields, the FG-fields will serve as fallback position. | init_mode=1,5,6 |
| ana_varlist_n2 | C(:) | | | List of mandatory analysis fields for domain 2 that must be present in the analysis file. If these fields are not found, the model aborts. For all other analysis fields, the FG-fields will serve as fallback position. | $init_mode=5,6$ |
| ana_varnames_map_file | С | | | Dictionary file which maps internal variable names onto GRIB2 shortnames or NetCDF var names. This is a text file with two columns separated by whitespace, where left column: ICON variable name, right column: GRIB2 short name. | |

| Parameter | Type | Default | Unit | Description | Scope |
|---------------------|------|---------|------|--|---------------------|
| latbc_varnames_map_ | С | | | Dictionary file which maps internal variable names | num_prefetch_proc=1 |
| file | | | | onto GRIB2 shortnames or NetCDF var names. | |
| | | | | This is a text file with two columns separated by | |
| | | | | whitespace, where left column: ICON variable | |
| | | | | name, right column: GRIB2 short name. This list | |
| | | | | contains variables that are to be read | |
| | | | | asynchronously for boundary data nudging in a | |
| | | | | HDCP2 simulation. All new boundary variables | |
| | | | | that in the future, would be read asynchronously. | |
| | | | | Need to be added to text file dict.latbc in run | |
| | | | | folder. | |

Defined and used in: src/namelists/mo_initicon_nml.f90

3.12 interpol_nml

| Parameter | Type | Default | Unit | Description | Scope |
|-----------------------|------|---------|------|---|----------------|
| l_intp_c2l | L | .TRUE. | | DEPRECATED | |
| l_mono_c2l | L | .TRUE. | | Monotonicity can be enforced by demanding that | |
| | | | | the interpolated value is not higher or lower than | |
| | | | | the stencil point values. | |
| llsq_high_consv | L | .TRUE. | | conservative (T) or non-conservative (F) | |
| | | | | least-squares reconstruction for high order transport | |
| lsq_high_ord | I | 3 | | polynomial order for high order reconstruction | |
| | | | | 1: linear | ihadv_tracer=4 |
| | | | | 2: quadratic | |
| | | | | 30: cubic (no 3^{rd} order cross deriv.) | |
| | | | | 3: cubic | |
| llsq_lin_consv | L | .FALSE. | | conservative (T) or non-conservative (F) | |
| | | | | least-squares reconstruction for 2nd order (linear) | |
| | | | | transport | |
| $nudge_efold_width$ | R | 2.0 | | e-folding width (in units of cell rows) for lateral | |
| | | | | boundary nudging coefficient | |

| Parameter | Type | Default | Unit | Description | Scope |
|----------------------|----------|-------------|------|---|-------|
| $nudge_max_coeff$ | R | 0.02 | | Maximum relaxation coefficient for lateral | |
| | | | | boundary nudging | |
| $nudge_zone_width$ | I | 8 | | Total width (in units of cell rows) for lateral | |
| | | | | boundary nudging zone. If < 0 the patch | |
| | | | | boundary_depth_index is used. | |
| rbf_dim_c2l | I | 10 | | stencil size for direct lon-lat interpolation: $4 =$ | |
| | | | | nearest neighbor, $13 = \text{vertex stencil}$, $10 = \text{edge}$ | |
| | | | | stencil. | |
| rbf scale mode ll | I | 2 | | Specifies, how the RBF shape parameter is | |
| | | | | determined for lon-lat interpolation. | |
| | | | | 1 : lookup table based on grid level | |
| | | | | 2 : determine automatically. | |
| | | | | So far, this routine only estimates the smallest | |
| | | | | value for the shape parameter for which the | |
| | | | | Cholesky is likely to succeed in floating point | |
| | | | | arithmetic. 3: explicitly set shape parameter in | |
| | | | | each output namelist | |
| rbf vec kern c | I | 1 | | Kernel type for reconstruction at cell centres: | |
| | | | | 1: Gaussian | |
| | | | | 3: inverse multiquadric | |
| rbf vec kern e | I | 3 | | Kernel type for reconstruction at edges: | |
| | | | | 1: Gaussian | |
| | | | | 3: inverse multiquadric | |
| rbf_vec_kern_ll | I | 1 | | Kernel type for reconstruction at lon-lat-points: | |
| | | | | 1: Gaussian | |
| | | | | 3: inverse multiquadric | |
| $rbf_vec_kern_v$ | I | 1 | | Kernel type for reconstruction at vertices: | |
| | | | | 1: Gaussian | |
| | | | | 3: inverse multiquadric | |
| $rbf_vec_scale_c$ | R(n_dom) | resolution- | | Scale factor for RBF reconstruction at cell centres | |
| | | dependent | | | |
| $rbf_vec_scale_e$ | R(n_dom) | resolution- | | Scale factor for RBF reconstruction at edges | |
| | | dependent | | | |

| Parameter | Type | Default | Unit | Description | Scope |
|----------------------|----------|-------------|------|---|-------|
| rbf_vec_scale_v | R(n_dom) | resolution- | | Scale factor for RBF reconstruction at vertices | |
| | | dependent | | | |
| support baryctr intp | L | .FALSE. | | Flag. If .FALSE. barycentric interpolation is | |
| | | | | replaced by a fallback interpolation. | |

Defined and used in: src/namelists/mo_interpol_nml.f90

3.13 io_nml

| Parameter | Type | Default | Unit | Description | Scope |
|-----------------------|------|---------|------|--|---------------------------|
| lkeep_in_sync | L | .FALSE. | | Sync output stream with file on disk after each | |
| | | | | timestep | |
| dt_{diag} | R | 86400. | s | diagnostic integral output interval | run_nml:output = |
| | | | | | "totint" |
| ${ m dt_checkpoint}$ | R | 2592000 | s | Time interval for writing restart files. Note that if | output /= "none" |
| | | | | the value of dt_checkpoint resulting from model | (run_nml) |
| | | | | default or user's specification is longer than | |
| | | | | time_nml:dt_restart, it will be reset (by the | |
| | | | | model) to dt_restart so that at least one restart file | |
| | | | | is generated during the restart cycle. | |
| $inextra_2d$ | I | 0 | | Number of extra 2D Fields for | dynamics_nml:iequations |
| | | | | diagnostic/debugging output. | = 3 (to be done for 1, 2) |
| $inextra_3d$ | I | 0 | | Number of extra 3D Fields for | dynamics_nml:iequations |
| | | | | diagnostic/debugging output. | = 3 (to be done for 1, 2) |
| lflux_avg | L | .TRUE. | | if .FALSE. the output fluxes are accumulated | iequations=3 |
| | | | | from the beginning of the run | iforcing=3 |
| | | | | if .TRUE. the output fluxes are average values | |
| | | | | from the beginning of the run, except of | |
| | | | | TOT_PREC that would be accumulated | |

| Parameter | Type | Default | Unit | Description | Scope |
|---------------------|------|---------|------|---|--------------------|
| itype_pres_msl | I | 1 | | Specifies method for computation of mean sea level | |
| | | | | pressure (and geopotential at pressure levels below | |
| | | | | the surface). | |
| | | | | 1: GME-type extrapolation, | |
| | | | | 2: stepwise analytical integration, | |
| | | | | 3: current IFS method, | |
| | | | | 4: IFS method with consistency correction | |
| itype_rh | I | 1 | | Specifies method for computation of relative | |
| | | | | humidity | |
| | | | | 1: WMO-type: water only (e_s=e_s_water), | |
| | | | | 2: IFS-type: mixed phase (water and ice), | |
| | | | | 3: IFS-type with clipping (rh ≤ 100) | |
| $output_nml_dict$ | C | , , | | File containing the mapping of variable names to | output_nml namelis |
| | | | | the internal ICON names. May contain the | |
| | | | | keyword <path> which will be substituted by</path> | |
| | | | | model_base_dir. | |
| | | | | The format of this file: | |
| | | | | One mapping per line, first the name as given in | |
| | | | | the ml_varlist, hl_varlist, pl_varlist or | |
| | | | | il_varlist of the output_nml namelists, then the | |
| | | | | internal ICON name, separated by an arbitrary | |
| | | | | number of blanks. The line may also start and end | |
| | | | | with an arbitrary number of blanks. Empty lines or | |
| | | | | lines starting with $\#$ are treated as comments. | |
| | | | | Names not covered by the mapping are used as they | |
| | | | | are. | |

| Parameter | Type | Default | Unit | Description | Scope |
|----------------------|------|---------|------|--|-----------------------|
| netcdf_dict | C | , , | | File containing the mapping from internal names to | output_nml namelists, |
| | | | | names written to NetCDF. May contain the | NetCDF output |
| | | | | keyword <path> which will be substituted by</path> | |
| | | | | model_base_dir. | |
| | | | | The format of this file: | |
| | | | | One mapping per line, first the name written to | |
| | | | | NetCDF, then the internal name, separated by an | |
| | | | | arbitrary number of blanks (inverse to the | |
| | | | | definition of output_nml_dict). The line may also | |
| | | | | start and end with an arbitrary number of blanks. | |
| | | | | Empty lines or lines starting with $\#$ are treated as | |
| | | | | comments. | |
| | | | | Names not covered by the mapping are output as | |
| | | | | they are. | |
| | | | | Note that the specification of output variables, e.g. | |
| | | | | in ml_varlist, is independent from this renaming, | |
| | | | | see the namelist parameter output_nml_dict for | |
| | | | | this. | |
| lnetcdf_flt64_output | L | .FALSE. | | If .TRUE. floating point variable output in NetCDF | |
| | | | | files is written in 64-bit instead of 32-bit accuracy. | |
| | | | | This is currently implemented for the atm. | |
| | | | | dynamical core and ECHAM physics. | |
| restart_file_type | I | 4 | | Type of restart file. One of CDI's | |
| | | | | FILETYPE_XXX. So far, only 4 | |
| | | | | (=FILETYPE_NC2) is allowed | |
| lmask_boundary | L | F | | Set to .TRUE., if interpolation zone should be | |
| | | | | masked in output. | |

Defined and used in: src/namelists/mo_io_nml.f90

3.14 les_nml (parameters for LES turbulence scheme; valid for inwp_turb=5)

| Parameter | Type | Default | Unit | Description | Scope |
|-------------------------------------|------|----------|--------------------|---|-------------------|
| sst | R | 300 | K | sea surface temperature for idealized LES | $isrfc_type=5,4$ |
| | | | | simulations | |
| shflx | R | 0.1 | $\mathrm{Km/s}$ | Kinematic sensible heat flux at surface | $isrfc_type = 2$ |
| lhflx | R | 0 | m/s | Kinematic latent heat flux at surface | $isrfc_type = 2$ |
| isrfc_type | I | 1 | | surface type | |
| | | | | 0 = No fluxes and zero shear stress | |
| | | | | 1 = TERRA land physics | |
| | | | | 2 = fixed surface fluxes | |
| | | | | 3 = fixed buoyancy fluxes | |
| | | | | 4 = RICO test case | |
| | | | | 5 = fixed SST | |
| ufric | R | -999 | m/s | friction velocity for idealized LES simulations; if < | |
| | | | | 0 then it is automatically diagnosed | |
| psfc | R | -999 | Pa | surface pressure for idealized LES simulations; if < | |
| | | | | 0 then it uses the surface pressure from dynamics | |
| \min_sfc_wind | R | 1.0 | m/s | Minimum surface wind for surface layer useful in | |
| | | | | the limit of free convection | |
| is_dry_cbl | L | .FALSE. | | switch for dry convective boundary layer | |
| | | | | simulations | |
| $smag_constant$ | R | 0.23 | | Smagorinsky constant | |
| km_min | R | 0.0 | | Minimum turbulent viscosity | |
| $\max_{\text{turb}_{\text{scale}}}$ | R | 300.0 | | Asymtotic maximum turblence length scale (useful | |
| | | | | for coarse grid LES and when grid is vertically | |
| | | | | stretched) | |
| $turb_prandtl$ | R | 0.333333 | | turbulent Prandtl number | |
| bflux | R | 0.0007 | $\mathrm{m^2/s^3}$ | buoyancy flux for idealized LES simulations | isrfc_type=3 |
| | | | | (Stevens 2007) | |
| $tran_coeff$ | R | 0.02 | m/s | transfer coefficient near surface for idealized LES | isrfc_type=3 |
| | | | | simulation (Stevens 2007) | |
| vert scheme type | I | 2 | | type of time integration scheme in vertical diffusion | |
| | | | | 1 = explicit | |
| | | | | 2 = fully implicit | |
| | | | | | |

| Parameter | Type | Default | Unit | Description | Scope |
|------------------|------|---------|------|---|-------|
| sampl_freq_sec | R | 60 | S | sampling frequency in seconds for statistical (1D | |
| | | | | and 0D) output | |
| avg_interval_sec | R | 900 | s | (time) averaging interval in seconds for 1D | |
| | | | | statistical output | |
| expname | C | ICOLES | | expname to name the statistical output file | |
| ldiag_les_out | L | .FALSE. | | Control for the statistical output in LES mode | |
| les_metric | L | .FALSE. | | Switch to turn on Smagorinsky diffusion with 3D | |
| | | | | metric terms to account for topography | |

Defined and used in: src/namelists/mo_les_nml.f90

$3.15 \quad limarea_nml \; (Scope: \; l_limited_area=1 \; in \; grid_nml)$

| Parameter | Type | Default | Unit | Description | Scope |
|--------------------|------|---------|------|---|----------------------|
| $itype_latbc$ | I | 0 | | Type of lateral boundary nudging. Nudge from | |
| | | | | 0: the initial data, | |
| | | | | 1: IFS data analysis/forecast (if | |
| | | | | initicon_nml:init_mode=4, we take COSMO-DE | |
| | | | | data), | |
| | | | | 2: ICON output data (with the identical 3d grid) | |
| ${f dtime_latbc}$ | R | 10800.0 | s | Time difference between two consecutive boundary | $itype_latbc \ge 1$ |
| | | | | data. | |
| $nlev_latbc$ | I | 0 | s | Number of vertical levels in boundary data. | $itype_latbc \ge 1$ |
| $latbc_filename$ | C | | | Filename of boundary data input file, default: | $itype_latbc \ge 1$ |
| | | | | "prepiconR <nroot>B<jlev>_<y><m><d><h>.nc".</h></d></m></y></jlev></nroot> | |
| | | | | $\langle y \rangle$, $\langle m \rangle$, $\langle d \rangle$, and $\langle h \rangle$ will be automatically | |
| | | | | replaced during the run-time. In case the time span | |
| | | | | between two consecutive boundary data is less than | |
| | | | | 1 hour, one can use <min> and <sec>. These files</sec></min> | |
| | | | | must be located in the latbc_path directory. | |
| latbc_path | C | | | Absolute path to boundary data. | $itype_latbc \ge 1$ |

$3.16 \quad lnd_nml$

| Parameter | Type | Default | Unit | Description | Scope |
|----------------------|------|---------|------|--|--------------------------|
| nlev_snow | I | 2 | | number of snow layers | lmulti_snow=.true. |
| ntiles | I | 1 | | number of tiles | |
| lsnowtile | L | .FALSE. | | .TRUE.: consider snow-covered and snow-free tiles | ntiles>1 |
| | | | | separately | |
| frlnd_thrhld | R | 0.05 | | fraction threshold for creating a land grid point | ntiles>1 |
| frlake_thrhld | R | 0.05 | | fraction threshold for creating a lake grid point | ntiles>1 |
| frsea_thrhld | R | 0.05 | | fraction threshold for creating a sea grid point | ntiles>1 |
| frlndtile_thrhld | R | 0.05 | | fraction threshold for retaining the respective tile | ntiles>1 |
| | | | | for a grid point | |
| lmelt | L | .TRUE. | | .TRUE. soil model with melting process | |
| lmelt_var | L | .TRUE. | | .TRUE. freezing temperature dependent on water | |
| | | | | content | |
| lana_rho_snow | L | .TRUE. | | .TRUE. take rho_snow-values from analysis file | $init_mode=1$ |
| lmulti_snow | L | .FALSE. | | .TRUE. for use of multi-layer snow model (default | |
| | | | | is single-sayer scheme) | |
| l2lay_rho_snow | L | .FALSE. | | .TRUE. predict additional snow density for upper | $lmulti_snow = .FALSE.$ |
| | | | | part of the snowpack, having a maximum depth of | |
| | | | | $\max_toplaydepth$ | |
| $\max_{toplaydepth}$ | R | 0.25 | m | maximum depth of uppermost snow layer | lmulti_snow=.TRUE. or |
| | | | | | l2lay_rho_snow=.TRUE. |
| idiag_snowfrac | I | 1 | | Type of snow-fraction diagnosis: | |
| | | | | 1 = based on SWE only | |
| | | | | 2-4 = more advanced experimental methods | |
| | | | | 20, 30, 40 = same as 2, 3, 4, respectively, but with | |
| | | | | artificial reduction of snow fraction in case of | |
| | | | | melting snow | |

| Parameter | Type | Default | Unit | Description | Scope |
|-----------------------|------|---------|------|--|--------------------------|
| itype_lndtbl | I | 3 | | Table values used for associating surface parameters | |
| | | | | to land-cover classes: | |
| | | | | 1 = defaults from extpar (GLC2000 and | |
| | | | | GLOBCOVER2009) | |
| | | | | 2 = Tuned version based on IFS values for | |
| | | | | globcover classes (GLOBCOVER2009 only) | |
| | | | | 3 = even more tuned operational version | |
| | | | | (GLOBCOVER2009 only) | |
| | | | | 4 = tuned version for new bare soil evaporation | |
| | | | | scheme (itype evsl=4) | |
| itype_root | I | 2 | | root density distribution: | |
| | | | | 1 = constant | |
| | | | | 2 = exponential | |
| itype_evsl | I | 2 | | type of bare soil evaporation parameterization | |
| | | | | 2 = Dickinson (1984) | |
| | | | | 3 = Noilhan and Planton (1989) | |
| | | | | 4 = Resistance-based scheme by Jan-Peter Schulz | |
| itype_heatcond | I | 2 | | type of soil heat conductivity | |
| | | | | 1 = constant soil heat conductivity | |
| | | | | 2 = moisture dependent soil heat conductivity | |
| | | | | 3 = variant of option 2 with reduced near-surface | |
| | | | | heat conductivity in the presence of plant cover | |
| $itype_interception$ | I | 1 | | type of plant interception | |
| | | | | 1 = standard scheme, effectively switched off by | |
| | | | | tiny value cwimax_ml | |
| | | | | 2 = Rain and snow interception (under) | |
| | | | | development) | |
| cwimax_ml | R | 1.e-6 | m | scaling parameter for maximum interception | $itype_interception = 1$ |
| | | | | storage (almost switched off); | |
| | | | | use 5.e-4 to activate interception storage | |
| itype_hydbound | I | 1 | | type of hydraulic lower boundary condition | |
| | | | | 1 = none | |
| | | | | 3 = ground water as lower boundary of soil column | |

| Parameter | Type | Default | Unit | Description | Scope |
|---------------------|------|---------|------|--|--------------------|
| lstomata | L | .TRUE. | | If .TRUE., use map of minimum stomatal resistance | |
| | | | | If .FALSE., use constant value of 150 s/m. | |
| l2tls | L | .TRUE. | | If .TRUE., forecast with 2-Time-Level integration | |
| | | | | scheme | |
| lseaice | L | .TRUE. | | .TRUE. for use of sea-ice model | |
| llake | L | .TRUE. | | .TRUE. for use of lake model | |
| $sstice_mode$ | I | 1 | | 1: SST and sea ice fraction are read from the | iequations=3 |
| | | | | analysis and kept constant. The sea ice fraction can | iforcing=3 |
| | | | | be modified by the seaice model. | |
| | | | | 2: SST and sea ice fraction are updated daily, based | |
| | | | | on climatological monthly means | |
| | | | | 3: SST and sea ice fraction are updated daily, based | |
| | | | | on actual monthly means | |
| | | | | 4: SST and sea ice fraction are updated daily, based | |
| | | | | on actual daily means, not yet implemented | |
| $sst_td_filename$ | C | | | Filename of SST input files for time dependent | $sstice_mode=2,3$ |
| | | | | SST. Default is | |
| | | | | " <path>SST_<year>_<month>_<gridfile>".</gridfile></month></year></path> | |
| | | | | May contain the keyword <path> which will be</path> | |
| | | | | substituted by model_base_dir | |
| $ci_td_filename$ | C | | | Filename of sea ice fraction input files for time | $sstice_mode=2,3$ |
| | | | | dependent sea ice fraction. Default is | |
| | | | | " <path>CI_<year>_<month>_<gridfile>".</gridfile></month></year></path> | |
| | | | | May contain the keyword <path> which will be</path> | |
| | | | | substituted by model_base_dir | |

Defined and used in: src/namelists/mo_lnd_nwp_nml.f90

3.17 ls_forcing_nml (parameters for large-scale forcing; valid for torus geometry)

| Parameter | Type | Default | Unit | Description | Scope |
|----------------------|------|---------|------|---|-----------------------|
| is_subsidence_moment | L | .FALSE. | | switch for enabling LS vertical advection due to subsidence for momentum equations | is_plane_torus=.TRUE. |

| Parameter | Type | Default | Unit | Description | Scope |
|--------------------|------|---------|------|--|-----------------------|
| is_subsidence_heat | L | .FALSE. | | switch for enabling LS vertical advection due to | is_plane_torus=.TRUE. |
| | | | | subsidence for thermal equations | |
| is_advection | L | .FALSE. | | switch for enabling LS horizontal advection | is_plane_torus=.TRUE. |
| | | | | (currently only for thermal equations) | |
| is_geowind | L | .FALSE. | | switch for enabling geostrophic wind | is_plane_torus=.TRUE. |
| is_rad_forcing | L | .FALSE. | | switch for enabling radiative forcing | is_plane_torus=.TRUE. |
| | | | | | inwp_rad=.FALSE. |
| is_theta | L | .FALSE. | | switch to indicate that the prescribed radiative | is_plane_torus=.TRUE. |
| | | | | forcing is for potential temperature | is_rad_forcing=.TRUE. |

Defined and used in: src/namelists/mo_ls_forcing_nml.f90

$3.18 \quad master_model_nml \; (repeated \; for \; each \; model)$

| Parameter | Type | Default | Unit | Description | Scope |
|---|------|---------|------|---|-------|
| model_name | С | | | Character string for naming this component. | |
| $egin{array}{c} oldsymbol{model} oldsymbol{-} \mathbf{namelist} oldsymbol{-} \end{array}$ | C | | | File name containing the model namelists. | |
| filename | | | | | |
| ${f model_type}$ | I | -1 | | Identifies which component to run. | |
| _ | | | | 1=atmosphere | |
| | | | | 2=ocean | |
| | | | | 3=radiation | |
| | | | | 99=dummy_model | |
| model_min_rank | I | 0 | | Start MPI rank for this model. | |
| model_max_rank | I | -1 | | End MPI rank for this model. | |
| $model_inc_rank$ | I | 1 | | Stride of MPI ranks. | |

$3.19 \quad master_nml$

| Parameter | Type | Default | Unit | Description | Scope |
|-----------|------|---------|------|---|-------|
| lrestart | L | .FALSE. | | If .TRUE.: Current experiment is started from a | |
| | | | | restart. | |

| Parameter | Type | Default | Unit | Description | Scope |
|------------------------|------|---------|------|---|-------|
| ${f model_base_dir}$ | С | , , | | General path which may be used in file names of | |
| | | | | other name lists: If a file name contains the | |
| | | | | keyword " <path>", then this model_base_dir will</path> | |
| | | | | be substituted. | |

$3.20 \quad meteogram_output_nml$

Nearest neighbour 'interpolation' is used for all variables.

| Parameter | Type | Default | Unit | Description | Scope |
|--------------------|----------|---------|------|--|-------|
| lmeteogram_enabled | L(n_dom) | .FALSE. | | Flag. True, if meteogram of output variables is | |
| | | | | desired. | |
| zprefix | C(n_dom) | "METEO | | string with file name prefix for output file | |

| | | | | function for computation of horizontal pressure | |
| | | | | gradient. This damps horizontally propagating | |
| | | | | sound waves. For R2B5 or coarser grids, values | |
| | | | | between $1/2$ and $2/3$ are recommended. | |
| l_open_ubc | L | .FALSE. | | .TRUE.: Use open upper boundary condition | |
| | | | | (rather than w=0) to allow vertical motions related | |
| | | | | to diabatic heating to extend beyond the model top | |

Defined and used in: src/namelists/mo_nonhydrostatic_nml.f90

3.22 nwp_phy_nml

The switches for the physics schemes and the time steps can be set for each model domain individually. If only one value is specified, it is copied to all child domains, implying that the same set of parameterizations and time steps is used in all domains. If the number of values given in the namelist is larger than 1 but less than the number of model domains, then the settings from the highest domain ID are used for the remaining model domains. If the time steps are not an integer multiple of the advective time step (dtime), then the time step of the respective physics parameterization is automatically rounded to the next higher integer multiple of the advective time step.

3.24 output_nml (relevant if run_nml/output='nml')

Please note: There may be several instances of output_nml in the namelist file, every one defining a list of variables with separate attributes for output.

| Parameter | Type | Default | Unit | Description | Scope |
|-----------------------|----------|------------|------|--|-------|
| dom | I(:) | -1 | | Array of domains for which this name-list is used. | |
| | | | | If not specified (or specified as -1 as the first array | |
| | | | | member), this name-list will be used for all | |
| | | | | domains. | |
| | | | | Attention: Depending on the setting of the | |
| | | | | parameter l_output_phys_patch these are either | |
| | | | | logical or physical domain numbers! | |
| ${ m file_interval}$ | C | 5 5 | | Defines the length of a file in terms of an ISO-8601 | |
| | | | | duration string. An example for this time stamp | |
| | | | | format is given below. This namelist parameter can | |
| | | | | be set instead of steps_per_file. | |
| $filename_format$ | C | see de- | | Output filename format. Includes keywords path, | |
| | | scription. | | output_filename, physdom, etc. (see below). | |
| | | | | Default is | |
| | | | | <pre><output_filename>_DOM<physdom>_<levtype>_</levtype></physdom></output_filename></pre> | |
| | | | | <pre><jfile></jfile></pre> | |
| filename_extn | \mid C | "default" | | User-specified filename extension (empty string also | |
| | | | | possible). If this namelist parameter is chosen as | |
| | | | | "default", then we have ".nc" for NetCDF output | |
| | | | | \mid files, and ".grb" for GRIB1/2. | |

| Parameter | Type | Default | Unit | Description | Scope |
|--------------|------|---------|------|---|-------|
| filetype | I | 4 | | One of CDI's FILETYPE_XXX constants. | |
| | | | | Possible values: | |
| | | | | 2=FILETYPE_GRB2, | |
| | | | | 4=FILETYPE_NC2, | |
| | | | | 5=FILETYPE_NC4 | |
| m_levels | C | None | | Model level indices (optional). | |
| | | | | Allowed is a comma- (or semicolon-) separated list | |
| | | | | of integers, and of integer ranges like "1020". One | |
| | | | | may also use the keyword "nlev" to denote the | |
| | | | | maximum integer (or, equivalently, "n" or "N"). | |
| | | | | Furthermore, arithmetic expressions like | |
| | | | | "(nlev - 2)" are possible. Basic example: | |
| | | | | m_levels = "1,3,510,20(nlev-2)" | |
| | | | | m_levels - 1,3,510,20(niev-2) | |
| h_levels | R(:) | None | m | height levels | |
| p_levels | R(:) | None | Pa | pressure levels | |
| i_levels | R(:) | None | K | isentropic levels | |
| ml_varlist | C(:) | None | | Name of model level fields to be output. | |
| hl_varlist | C(:) | None | | Name of height level fields to be output. | |
| pl_varlist | C(:) | None | | Name of pressure level fields to be output. | |
| il_varlist | C(:) | None | | Name of isentropic level fields to be output. | |
| include_last | L | .TRUE. | | Flag whether to include the last time step | |
| mode | I | 2 | | 1 = forecast mode, 2 = climate mode | |
| | | | | In climate mode the time axis of the output file is | |
| | | | | set to TAXIS_ABSOLUTE. In forecast mode it is | |
| | | | | set to TAXIS_RELATIVE. Till now the forecast | |
| | | | | mode only works if the output is at multiples of 1 | |
| | | | | hour | |

| Parameter | Type | Default | Unit | Description | Scope |
|--------------------|--------|---------|------|---|--------|
| taxis_tunit | I | 2 | | Time unit of the TAXIS_RELATIVE time axis. | mode=1 |
| _ | | | | 1 = TUNIT SECOND | |
| | | | | $2 = \text{TUNIT}^{-}\text{MINUTE}$ | |
| | | | | $5 = \text{TUNIT}^{-}\text{HOUR}$ | |
| | | | | $9 = \text{TUNIT}^{-}\text{DAY}$ | |
| | | | | For a complete list of possible values see cdilib.c | |
| output bounds | R(k*3) | None | | Post-processing times: start, end, increment. We | |
| • – | | | | choose the advection time step matching or | |
| | | | | following the requested output time, therefore we | |
| | | | | require output_bounds(3) > dtime. Multiple | |
| | | | | triples are possible in order to define multiple | |
| | | | | starts/ends/intervals. See namelist parameters | |
| | | | | output_start, output_end, output_interval for | |
| | | | | an alternative specification of output events. | |
| output time unit | I | 1 | | Units of output bounds specification. | |
| • – – | | | | 1 = second | |
| | | | | 2 = minute | |
| | | | | 3 = hour | |
| | | | | 4 = day | |
| | | | | 5 = month | |
| | | | | 6 = year | |
| $output_filename$ | C | None | | Output filename prefix (which may include path). | |
| • = | | | | Domain number, level type, file number and | |
| | | | | extension will be added, according to the format | |
| | | | | given in namelist parameter "filename format". | |
| output grid | L | .FALSE. | | Flag whether grid information is added to output. | |
| output_start | C(:) | 5 5 | | ISO8601 time stamp for begin of output. An | |
| | | | | example for this time stamp format is given below. | |
| | | | | More than one value is possible in order to define | |
| | | | | multiple start/end/interval triples. See namelist | |
| | | | | parameter output_bounds for an alternative | |
| | | | | specification of output events. | |

| Parameter | Type | Default | Unit | Description | Scope |
|---------------------|------|---------|------|---|-------|
| output end | C(:) | 5 5 | | ISO8601 time stamp for end of output. An example | |
| _ | | | | for this time stamp format is given below. More | |
| | | | | than one value is possible in order to define | |
| | | | | multiple start/end/interval triples. See namelist | |
| | | | | parameter output_bounds for an alternative | |
| | | | | specification of output events. | |
| output interval | C(:) | 5 5 | | ISO8601 time stamp for repeating output intervals. | |
| - - | | | | We choose the advection time step matching or | |
| | | | | following the requested output time, therefore we | |
| | | | | require output_bounds(3) > dtime. An example | |
| | | | | for this time stamp format is given below. More | |
| | | | | than one value is possible in order to define | |
| | | | | multiple start/end/interval triples. See namelist | |
| | | | | parameter output_bounds for an alternative | |
| | | | | specification of output events. | |
| $pe_placement_il$ | I(:) | -1 | | Advanced output option: Explicit assignment of | |
| | | | | output MPI ranks to the isentropic level output file. | |
| | | | | At most stream_partitions_il different ranks | |
| | | | | can be specified. See namelist parameter | |
| | | | | <pre>pe_placement_ml for further details.</pre> | |
| $pe_placement_hl$ | I(:) | -1 | | Advanced output option: Explicit assignment of | |
| | | | | output MPI ranks to the height level output file. At | |
| | | | | most stream_partitions_hl different ranks can be | |
| | | | | specified. See namelist parameter | |
| | | | | <pre>pe_placement_ml for further details.</pre> | |
| $pe_placement_ml$ | I(:) | -1 | | Advanced output option: Explicit assignment of | |
| | | | | output MPI ranks to the model level output file. At | |
| | | | | most stream_partitions_ml different ranks can be | |
| | | | | specified, out of the following list: 0 | |
| | | | | (num_io_procs - 1). If this namelist parameters is | |
| | | | | not provided, then the output ranks are chosen in a | |
| | | | | Round-Robin fashion among those ranks that are | |
| | | | | not occupied by explicitly placed output files. | |

| Parameter | Type | Default | Unit | Description | Scope |
|--------------------|------|-----------|------|--|---------|
| pe_placement_pl | I(:) | -1 | | Advanced output option: Explicit assignment of | |
| | | | | output MPI ranks to the pressure level output file. | |
| | | | | At most stream_partitions_pl different ranks | |
| | | | | can be specified. See namelist parameter | |
| | | | | <pre>pe_placement_ml for further details.</pre> | |
| ready_file | C | 'default' | | A ready file is a technique for handling | |
| | | | | dependencies between the NWP processes. The | |
| | | | | completion of the write process is signalled by | |
| | | | | creating a small file with name ready_file. | |
| | | | | Different output_nml's may be joined together to | |
| | | | | form a single ready file event. The setting of | |
| | | | | <pre>ready_file = "default" does not create a ready</pre> | |
| | | | | file. The ready file name may contain string tokens | |
| | | | | <pre><path>, <datetime>, <ddhhmmss> which are</ddhhmmss></datetime></path></pre> | |
| | | | | substituted as described for the namelist parameter | |
| | | | | filename_format. | |
| reg_def_mode | I | 0 | | Specify if the "delta" value prescribes an interval | remap=1 |
| | | | | size or the total *number* of intervals: 0: switch | |
| | | | | automatically between increment and no. of grid | |
| | | | | points, 1: reg_lon/lat_def(2) specifies increment, | |
| | | | | 2: reg_lon/lat_def(2) specifies no. of grid points. | |
| remap | I | 0 | | interpolate horizontally | |
| | | | | 0: none | |
| | | | | 1: to regular lat-lon grid | |
| $north_pole$ | R(2) | 0,90 | | definition of north pole for rotated lon-lat grids | |
| | | | | ([longitude, latitude]. | |
| $ m reg_lat_def$ | R(3) | None | | start, increment, end latitude in degrees. | remap=1 |
| | | | | Alternatively, the user may set the number of grid | |
| | | | | points instead of an increment. Details for the | |
| | | | | setting of regular grids is given below together with | |
| | | | | an example. | |

| Parameter | Type | Default | Unit | Description | Scope |
|--------------------------|------|------------|------|--|-------------------------------|
| $ m reg_lon_def$ | R(3) | None | | The regular grid points are specified by three | remap=1 |
| | | | | values: start, increment, end given in degrees. | |
| | | | | Alternatively, the user may set the number of grid | |
| | | | | points instead of an increment. Details for the | |
| | | | | setting of regular grids is given below together with | |
| | | | | an example. | |
| steps per file | I | -1 | | Max number of output steps in one output file. If | |
| | | | | this number is reached, a new output file will be | |
| | | | | opened. | |
| steps per file inclfirst | L | see descr. | | Defines if first step is counted wrt. | |
| | | | | steps_per_file files count. The default is | |
| | | | | .FALSE. for GRIB2 output, and .TRUE. otherwise. | |
| stream partitions hl | I | 1 | | Splits height level output of this namelist into | |
| | | | | several concurrent alternating files. See namelist | |
| | | | | parameter stream_partitions_ml for details. | |
| stream partitions il | I | 1 | | Splits isentropic level output of this namelist into | |
| | | | | several concurrent alternating files. See namelist | |
| | | | | parameter stream_partitions_ml for details. | |
| stream partitions ml | I | 1 | | Splits model level output of this namelist into | |
| | | | | several concurrent alternating files. The output is | |
| | | | | split into N files, where the start date of part i gets | |
| | | | | an offset of $(i-1) * output_interval$. The output | |
| | | | | interval is then replaced by $N * \text{output_interval}$, | |
| | | | | the include_last flag is set to .FALSE., the | |
| | | | | steps_per_file_inclfirst flag is set to .FALSE., | |
| | | | | and the steps_per_file counter is set to 1. | |
| stream partitions pl | I | 1 | | Splits pressure level output of this namelist into | |
| | | | | several concurrent alternating files. See namelist | |
| | | | | parameter stream_partitions_ml for details. | |
| rbf scale | R | -1. | | Explicit setting of RBF shape parameter for | interpol_nml:rbf_scale_mode_1 |
| _ | | | | interpolated lon-lat output. This namelist | |
| | | | | parameter is only active in combination with | |
| | | | | interpol nml:rbf scale mode ll=3. | |

Defined and used in: src/io/shared/mo_name_list_output_init.f90

Interpolation onto regular grids: Horizontal interpolation onto regular grids is possible through the namelist setting remap=1, where the mesh is defined by the parameters

- reg_lon_def: mesh latitudes in degrees,
- reg_lat_def: mesh longitudes in degrees,
- north_pole: definition of north pole for rotated lon-lat grids.

The regular grid points in reg_lon_def , reg_lat_def are each specified by three values, given in degrees: start, increment, end. The mesh then contains all grid points start + k * increment <= end, where k is an integer. Instead of defining an increment it is also possible to prescribe the number of grid points.

- Setting the namelist parameter reg_def_mode=0: Switch automatically from increment specification to no. of grid points, when the reg_lon/lat_def(2) value is larger than 5.0.
- 1: reg_lon/lat_def(2) specifies increment
- 2: reg_lon/lat_def(2) specifies no. of grid points

For longitude values the last grid point is omitted if the end point matches the start point, e.g. for 0 and 360 degrees.

Examples

local grid with 0.5 degree increment:

reg_lon_def = -30.,0.5,30.

reg_lat_def = 90.,-0.5, -90.

global grid with 720x361 grid points:

reg_lon_def = 0.,720,360.

reg_lat_def = -90.,360,90.

Time stamp format: The namelist parameters output_start, output_end, output_interval allow the specification of time stamps according to ISO 8601. The general format for time stamps is YYYY-MM-DDThh:mm:ss where Y: year, M: month, D: day for dates, and hh: hour, mm: minute, ss: second for time strings. The general format for durations is PnYnMnDTnHnMnS. See, for example, http://en.wikipedia.org/wiki/ISO_8601 for details and further specifications.

NOTE: as the mtime library underlaying the output driver currently has some restrictions concerning the specification of durations:

1. Any number n in PnYnMnDTnHnMnS must have two digits. For instance use "PT06H" instead of "PT6H"

2. In a duration string PnyearYnmonMndayDTnhrHnminMnsecS the numbers nxyz must not pass the carry over number to the next larger time unit: 0 <= nmon <= 12, 0 <= nhr <= 23, 0 <= nmin <= 59, 0 <= nsec <= 59.999. For instance use "P01D" instead of "PT24H", or "PT01M" instead of "PT60S".

Soon the formatting problem will be resolved and the valid number ranges will be enlarged. (2013-12-16).

Examples

```
date and time representation (output_start, output_end) 2013-10-27T13:41:00Z duration (output_interval) POODTO6H00M00S
```

Variable Groups

Keyword "group:": Using the "group:" keyword for the namelist parameters ml_varlist, hl_varlist, pl_varlist, sets of common variables can be added to the output:

```
group:all
                                                  output of all variables (caution: do not combine with mixed vertical interpolation)
                                                  basic atmospheric variables on model levels
group:atmo_ml_vars
                                                  same set as atmo ml vars, but except pres
group:atmo_pl_vars
                                                  same set as atmo ml vars, but expect height
group:atmo_zl_vars
                                                  additional prognostic variables of the nonhydrostatic model
group:nh_prog_vars
                                                  derived atmospheric variables
group:atmo_derived_vars
group:rad_vars
group:precip_vars
group:cloud_diag
group:pbl_vars
group:phys_tendencies
group:land_vars
                                                  snow variables
group:snow_vars
group:multisnow_vars
                                                  multi-layer snow variables
group:additional_precip_vars
                                                  DWD first guess fields (atmosphere)
group:dwd_fg_atm_vars
                                                  DWD first guess fields (surface/soil)
group:dwd_fg_sfc_vars
group:ART_AERO_VOLC
                                                  ART volcanic ash fields
                                                  ART radioactive tracer fields
group: ART_AERO_RADIO
group:ART_AERO_DUST
                                                  ART mineral dust aerosol fields
```

group: ART_AERO_SEAS ART sea salt aerosol fields

group:prog_timemean time mean output: temp, u, v, rho group:tracer_timemean time mean output: qv, qc, qi

group:echam_timemean time mean output: most echam surface variables

group:atmo_timemean time mean variables from prog_timemean,tracer_timemean, echam_timemean

Keyword "tiles:": The "tiles:" keyword allows to add all tiles of a specific variable to the output, without the need to specify all tile fields separately. E.g. "tiles:t_g" (read: "tiles of t_g") automatically adds all t_g_t_X fields to the output. Here, X is a placeholder for the tile number. Make sure to specify the name of the aggregated variable rather than the name of the corresponding tile container (i.e. in the given example it must be t_g, and not t_g_t!).

Note:

There exists a special syntax which allows to remove variables from the output list, e.g. if these undesired variables were contained in a previously selected group.

Typing "-<varname>" (for example "-temp") removes the variable from the union set of group variables and other selected variables. Note that typos are not detected but that the corresponding variable is simply not removed!

Keyword substitution in output filename (filename_format):

path substituted by model base dir output_filename substituted by output_filename physdom substituted by physical patch ID levtype substituted by level type "ML", "PL", "HL", "IL" like levtype, but in lower case levtype_l substituted by output file counter jfile substituted by ISO-8601 date-time stamp in format YYYY-MM-DDThh:mm:ss.ssz datetime datetime2 substituted by ISO-8601 date-time stamp in format YYYYMMDDThhmmssZ datetime3 substituted by ISO-8601 date-time stamp in format YYYYMMDDThhmmss.sssZ substituted by relative day-hour-minute-second string ddhhmmss hhhmmss substituted by relative hour-minute-second string If namelist is split into concurrent files: number of stream partitions. npartitions If namelist is split into concurrent files: stream partition index of this file. ifile_partition total_index If namelist is split into concurrent files: substituted by the file counter

(like in jfile), which an "unsplit" namelist would have produced

$3.25 \quad parallel_nml$

| Parameter | Type | Default | Unit | Description | Scope |
|------------------------|------|---------|------|---|---------------------------------|
| nproma | I | 1 | | chunk length | |
| n_ghost_rows | I | 1 | | number of halo cell rows | |
| division_method | I | 1 | | method of domain decomposition | |
| | | | | 0: read in from file | |
| | | | | 1: use built-in geometric subdivision | |
| division_file_name | C | | | Name of division file | $division_method = 0$ |
| $ldiv_phys_dom$ | L | .TRUE. | | .TRUE.: split into physical domains before | $division_method = 1$ |
| | | | | computing domain decomposition (in case of | |
| | | | | merged domains) | |
| | | | | (This reduces load imbalance; turning off this | |
| | | | | option is not recommended except for very small | |
| | | | | processor numbers) | |
| p_test_run | L | .FALSE. | | .TRUE. means verification run for MPI | |
| | | | | parallelization (PE 0 processes full domain) | |
| l_test_openmp | L | .FALSE. | | if .TRUE. is combined with p_test_run=.TRUE. | $p_{\text{test_run}} = .TRUE.$ |
| | | | | and OpenMP parallelization, the test PE gets only | |
| | | | | 1 thread in order to verify the OpenMP | |
| | | | | parallelization | |
| $l_{\log_{checks}}$ | L | .FALSE. | | if .TRUE. messages are generated during each | |
| | | | | synchonization step (use for debugging only) | |
| l_fast_sum | L | .FALSE. | | if .TRUE., use fast (not | |
| | | | | processor-configuration-invariant) global summation | |
| $use_dycore_barrier$ | L | .FALSE. | | if .TRUE., set an MPI barrier at the beginning of | |
| | | | | the nonhydrostatic solver (do not use for | |
| | | | | production runs!) | |
| $itype_exch_barrier$ | I | 0 | | 1: set an MPI barrier at the beginning of each MPI | |
| | | | | exchange call | |
| | | | | 2: set an MPI barrier after each MPI WAIT call | |
| | | | | 3: 1+2 (do not use for production runs!) | |

| Parameter | Type | Default | Unit | Description | Scope |
|--------------------------------------|------|---------|------|--|-----------------------|
| iorder_sendrecv | I | 1 | | Sequence of send/receive calls: | |

Defined and used in: src/namelists/mo_radiation_nml.f90

$3.28 \quad run_nml$

| Parameter | Type | Default | Unit | Description | Scope |
|-----------|------|---------|------|--|-------|
| nsteps | I | -999 | | Number of time steps of this run. Allowed range is | |
| | | | | ≥ 0 ; setting a value of 0 allows writing initial | |
| | | | | output (including internal remapping) without | |
| | | | | calculating time steps. | |

| Parameter | Type | Default | Unit | Description | Scope |
|--------------|--------|---------|------|--|-------------------|
| dtime | R | 600.0 | s | time step. | |
| | | | | For real case runs the maximum allowable time step | |
| | | | | can be estimated as | |
| | | | | $1.8 \cdot \text{ndyn_substeps} \cdot \overline{\Delta x} \text{s km}^{-1},$ | |
| | | | | where $\overline{\Delta x}$ is the average resolution in km and | |
| | | | | ndyn_substeps is the number of dynamics substeps | |
| | | | | set in nonhydrostatic_nml. ndyn_substeps should | |
| | | | | not be increased beyond the default value 5. | |
| ltestcase | | .TRUE. | | Idealized testcase runs | |
| ldynamics | L | .TRUE. | | Compute adiabatic dynamic tendencies | |
| iforcing | I | 0 | | Forcing of dynamics and transport by | |
| | | | | parameterized processes. Use positive indices for | |
| | | | | the atmosphere and negative indices for the ocean. | |
| | | | | 0: no forcing | |
| | | | | 1: Held-Suarez forcing | |
| | | | | 2: ECHAM forcing | |
| | | | | 3: NWP forcing | |
| | | | | 4: local diabatic forcing without physics | |
| | | | | 5: local diabatic forcing with physics | |
| 1. | _ | DATCE | | -1: MPIOM forcing (to be done) | |
| ltransport | L | .FALSE. | | Compute large-scale tracer transport | |
| ntracer | I | 0 | | Number of advected tracers handled by the | |
| 1 . 4 | | EAT CE | | large-scale transport scheme | |
| lvert_nest | L | .FALSE. | | If set to .true. vertical nesting is switched on (i.e. | |
| 1 | T/ | 31 | | variable number of vertical levels) | ltt TDIJE |
| num_lev | I(max_ | 31 | | Number of full levels (atm.) for each domain | lvert_nest=.TRUE. |
| nshift | dom) | | | wentical half lavel of narrout demain which coincides | leant nest TDIE |

| timers_level | 1 | 1 | | | |

| Parameter | Type | Default | Unit | Description | Scope |
|-----------------------------|----------|----------|------|--|----------------|
| activate_sync_timers | L | F | | TRUE: Timer for monitoring runtime of | |
| , , | | 10 | | communication routines $(FALSE = off)$ | |
| ${ m msg_level}$ | I | 10 | | controls how much printout is written during | |
| | | | | runtime. For values less than 5, only the time step is written. | |
| msg timestamp | \mid L | .FALSE. | | If TRUE, precede output messages by time stamp. | |
| test mode | I | 0 | | Setting a value larger than 0 activates a dummy | iequations = 3 |
| test_mode | 1 | | | mode in which time stepping is changed into just | requations = 9 |
| | | | | doing iterations, and MPI communication is | |
| | | | | replaced by copying some value from the send | |
| | | | | buffer into the receive buffer (does not work with | |
| | | | | nesting and reduced radiation grid because the send | |
| | | | | buffer may then be empty on some PEs) | |
| ${\tt debug_check_level}$ | I | 0 | | Setting a value larger than 0 activates debug checks. | |
| output | C(:) | "nml", | | Main switch for enabling/disabling components of | |
| | | "totint" | | the model output. One or more choices can be set | |
| | | | | (as an array of string constants). Possible choices | |
| | | | | are: | |
| | | | | • "none": switch off all output; | |
| | | | | • "nml": new output mode (cf. output_nml); | |
| | | | | • "totint": computation of total integrals. | |
| | | | | • "maxwinds": write max. winds to separate | |
| | | | | ASCII file "maxwinds.log". | |
| | | | | If the output namelist parameter is not set | |
| | | | | explicitly, the default setting "nml","totint" is | |
| | | | | assumed. | |
| $restart_filename$ | С | | | File name for restart/checkpoint files (containing | |
| | | | | keyword substitution patterns <gridfile>, <idom>,</idom></gridfile> | |
| | | | | <pre><rsttime>, <mtype>). default:</mtype></rsttime></pre> | |
| | | | | " <gridfile>_restart_<mtype>_<rsttime>.nc".</rsttime></mtype></gridfile> | |

| Parameter | Type | Default | Unit | Description | Scope |
|-----------------------|------|---------|------|---|-------|
| profiling_output | I | 1 | | controls how profiling printout is written: | |
| | | | | TIMER_MODE_AGGREGATED=1, | |
| | | | | TIMER MODE DETAILED=2, | |
| | | | | TIMER_MODE_WRITE_FILES=3. | |
| lart | L | .FALSE. | | Main switch which enables the treatment of | |
| | | | | atmospheric aerosol and trace gases (The ART | |
| | | | | package of KIT is needed for this purpose) | |
| check_uuid_gracefully | L | .FALSE. | | If this flag is set to .TRUE. we give only warnings | |
| | | | | for non-matching UUIDs. | |

Defined and used in: src/namelists/mo_run_nml.f90

$3.29 \quad sleve_nml \ (relevant \ if \ nonhydrostatic_nml:ivctype=2)$

| Parameter | Type | Default | Unit | Description | Scope |
|-----------------|------|---------|------|---|-------|
| min_lay_thckn | R | 50 | m | Layer thickness of lowermost layer; specifying zero | |
| | | | | or a negative value leads to constant layer | |
| | | | | thicknesses determined by top_height and nlev | |
| max_lay_thckn | R | 25000 | m | Maximum layer thickness below the height given by | |
| | | | | htop_thcknlimit (NWP recommendation: 400 m) | |
| | | | | Use with caution! Too ambitious settings may result | |
| | | | | in numerically unstable layer configurations. | |
| htop_thcknlimit | R | 15000 | m | Height below which the layer thickness does not | |
| | | | | exceed max_lay_thckn | |
| top_height | R | 23500.0 | m | Height of model top | |
| $stretch_fac$ | R | 1.0 | | Stretching factor to vary distribution of model | |
| | | | | levels; values <1 increase the layer thickness near | |
| | | | | the model top | |
| decay_scale_1 | R | 4000 | m | Decay scale of large-scale topography component | |
| decay_scale_2 | R | 2500 | m | Decay scale of small-scale topography component | |
| decay_exp | R | 1.2 | | Exponent of decay function | |
| flat_height | R | 16000 | m | Height above which the coordinate surfaces are flat | |

| Parameter | Type | Default | Unit | Description | Scope |
|--------------|------|---------|------|--|-------|
| $lread_smt$ | L | .FALSE. | | read smoothed topography from file (TRUE) or | |
| | | | | compute internally (FALSE) | |

Defined and used in: src/namelists/mo_sleve_nml.f90

$3.30 \text{ synsat } \text{nml}^1$

This namelist enables the RTTOV library incorporated into ICON for simulating satellite radiance and brightness temperatures. RTTOV is a radiative transfer model for nadir-viewing passive visible, infrared and microwave satellite radiometers, spectrometers and interferometers, see

https://nwpsaf.eu/deliverables/rtm

for detailed information.

| Parameter | Type | Default | Unit | Description | Scope |
|------------|----------|---------|------|--|-------|
| lsynsat | L | .FALSE. | | Main switch: Enables/disables computation of | |
| | (max_dom |) | | synthetic satellite imagery for each model domain. | |
| nlev_rttov | I | 51 | | Number of RTTOV levels. | |

Enabling the synsat module makes the following 32 two-dimensional output fields available:

| SYNMSG_RAD_CL_IR3.9 | SYNMSG_BT_CL_IR3.9 | SYNMSG_RAD_CL_WV6.2 | SYNMSG_BT_CL_WV6.2 |
|----------------------|---------------------|----------------------|---------------------|
| SYNMSG_RAD_CL_WV7.3 | SYNMSG_BT_CL_WV7.3 | SYNMSG_RAD_CL_IR8.7 | SYNMSG_BT_CL_IR8.7 |
| SYNMSG_RAD_CL_IR9.7 | SYNMSG_BT_CL_IR9.7 | SYNMSG_RAD_CL_IR10.8 | SYNMSG_BT_CL_IR10.8 |
| SYNMSG_RAD_CL_IR12.1 | SYNMSG_BT_CL_IR12.1 | SYNMSG_RAD_CL_IR13.4 | SYNMSG_BT_CL_IR13.4 |
| SYNMSG_RAD_CS_IR3.9 | SYNMSG_BT_CS_IR3.9 | SYNMSG_RAD_CS_WV6.2 | SYNMSG_BT_CS_WV6.2 |
| SYNMSG_RAD_CS_WV7.3 | SYNMSG_BT_CS_WV7.3 | SYNMSG_RAD_CS_IR8.7 | SYNMSG_BT_CS_IR8.7 |
| SYNMSG_RAD_CS_IR9.7 | SYNMSG_BT_CS_IR9.7 | SYNMSG_RAD_CS_IR10.8 | SYNMSG_BT_CS_IR10.8 |
| SYNMSG_RAD_CS_IR12.1 | SYNMSG_BT_CS_IR12.1 | SYNMSG_RAD_CS_IR13.4 | SYNMSG_BT_CS_IR13.4 |

Here, RAD denotes radiance, BT brightness temperature, CL cloudy, and CS clear sky, supplemented by the channel name.

¹Important note: This feature is currently active for configuration dwd+cray only.

$3.31 \quad time_nml$

| Parameter | Type | Default | Unit | Description | Scope |
|----------------------|--------------|----------------------|------|---|-------|
| calendar | I | 1 | | Calendar type: | |
| | | | | 0=Julian/Gregorian | |
| | | | | 1=proleptic Gregorian | |
| | | | | 2=30day/month, 360 day/year | |
| $dt_restart$ | R | 86400.*30. | s | Length of restart cycle in seconds. This namelist | |
| | | | | parameter specifies how long the model runs until it | |
| | | | | saves its state to a file and stops. Later, the model | |
| | | | | run can be resumed, s. t. a simulation over a long | |
| | | | | period of time can be split into a chain of restarted | |
| | | | | model runs. | |
| | | | | Note that the frequency of writing restart files is | |
| | | | | controlled by io_nml:dt_checkpoint. Only if the | |
| | | | | value of dt_checkpoint resulting from model | |
| | | | | default or user's specification is longer than | |
| | | | | dt_restart, it will be reset (by the model) to | |
| | | | | dt_restart so that at least one restart file is | |
| | | | | generated during the restart cycle. If dt_restart is | |
| | | | | larger than but not a multiple of dt_checkpoint, | |
| | | | | restart file will <i>not</i> be generated at the end of the | |
| | | 10000 | | restart cycle. | |
| ini_datetime_string | С | '2008- | | Initial date and time of the simulation | |
| | | 09-01T 00:00:00Z' | | | |
| and datations atving | $^{\circ}$ C | '2008- | | End date and time of the simulation | |
| end_datetime_string | | 09-01T | | End date and time of the simulation | |
| | | 09-011 01:40:00Z | | | |
| is relative time | bound L | .FALSE. | | .TRUE., if time loop shall start with step 0 | |
| is_relative_time | " | .FALSE. | | regardless whether we are in a standard run or in a | |
| | | | | restarted run (which means re-initialized run). | |
| | | | | restarted run (which means re-initianzed run). | |

Length of the run If "nsteps" in run_nml is positive, then nsteps*dtime is used to compute the end date and time of the run. Else the initial date and time, the end date and time, dt_restart, as well as the time step are used to compute "nsteps".

$3.32 \quad transport_nml \; (used \; if \; run_nml/ltransport=.TRUE.)$

| Parameter | Type | Default | Unit | Description | Scope |
|-----------------|------------|---------|------|--|----------------------------|
| lvadv_tracer | L | .TRUE. | | TRUE : compute vertical tracer advection | |
| | | | | FALSE: do not compute vertical tracer advection | |
| $ihadv_tracer$ | I(ntracer) | 2 | | Tracer specific method to compute horizontal | |
| | | | | advection: | |
| | | | | 0: no horiz. transport (note that the specific tracer | |
| | | | | quantity q is kept constant and not tracer mass ρq) | |
| | | | | 1: upwind (1st order) | |
| | | | | 2: Miura (2nd order, linear reconstr.) | |
| | | | | 3: Miura3 (quadr. or cubic reconstr.) | $lsq_high_ord \in [2,3]$ |
| | | | | 4: FFSL (quadr. or cubic reconstr.) | $lsq_high_ord \in [2,3]$ |
| | | | | 5: hybrid Miura3/FFSL (quadr. or cubic reconstr.) | $lsq_high_ord \in [2,3]$ |
| | | | | 20: miura (2nd order, lin. reconstr.) with | |
| | | | | subcycling | |
| | | | | 22: combination of miura and miura with | |
| | | | | subcycling | |
| | | | | 32: combination of miura and miura with | |
| | | | | subcycling | |
| | | | | 42: combination of FFSL and miura with | |
| | | | | subcycling | |
| | | | | 52: combination of hybrid FFSL/Miura3 with | |
| | | | | subcycling | |
| | | | | Subcycling means that the integration from time | |
| | | | | step n to n+1 is splitted into substeps to meet the | |
| | | | | stability requirements. For NWP runs, substepping | |
| | | | | is generally applied above $z = 22 \mathrm{km}$ (see | |
| | | | | $nonhydrostatic_nml/hbot_qvsubstep).$ | |
| ivadv_tracer | I(ntracer) | 3 | | Tracer specific method to compute vertical advection: | lvadv_tracer=TRUE |

| Parameter | Type | Default | Unit | Description | Scope |
|-----------------|------------|---------|---|--|------------------------|
| | | | | 0: no vert. transport (note that tracer mass ρq | |
| | | | | instead of the specific tracer quantity q is kept | |
| | | | | constant. This differs from the behaviour in | |
| | | | | horizontal direction!) | |
| | | | | 1: upwind (1st order) | |

| | | | | momentum, valid in the stratosphere above 30 km | |
| tkhmin_strat | R | 5 | m^2/s | Enhanced scaling factor for minimum vertical | |
| | | | | diffusion coefficient (proportional to $1/\sqrt{Ri}$) for | |
| | | | | heat and moisture, valid in the stratosphere above | |
| | | | | 30 km | |
| itype_synd | I | 2 | | Type of diagnostics of synoptic near surface | |
| | | | | variables: | |
| | | | | 1: Considering the mean surface roughness of a grid | |
| | | | | box | |
| | | | | 2: Considering a fictive surface roughness of a | |
| | | | | SYNOP lawn | |
| rlam_heat | R | 1.0 | 1 | Scaling factor of the laminar boundary layer for | |
| | | | | heat (scalars). The larger rlam_heat, the larger is | |
| | | | | the laminar resistance. | |
| rat_sea | R | 10.0 | 1 | Ratio of laminar scaling factors for scalars over sea | |
| | | | | and land. The larger rat_sea, the larger is the | |
| | | | | laminar resistance for a sea surface compared to a | |
| | | | | land surface. | |
| tkesmot | R | 0.15 | 1 | Time smoothing factor within [0, 1] for TKE. In | |
| | | | | case of $tkesmot = 0$, no smoothing is active. | |
| fresmot | R | 0.0 | 1 | Vertical smoothing factor within $[0,1]$ for TKE | |
| | | | | forcing terms. In case of $frcmot = 0$, no smoothing | |
| | | | | is active. | |
| $imode_frcsmot$ | I | 1 | | 1 = apply vertical smoothing (if frcsmot > 0) | |
| | | | | uniformly over the globe | |
| | | | | 2 = restrict vertical smoothing to the tropics | |
| | | | | (reduces the moist bias in the tropics while avoiding | |
| | | | | adverse effects on NWP skill scores in the | |
| | | | | extratropics) | |
| impl_s | R | 1.20 | 1 | Implicit weight near the surface (maximal value) | |

| Parameter | Type | Default | Unit | Description | Scope |
|------------|------|---------|------|---|------------------|
| impl_t | R | 0.75 | 1 | Implicit weight near top of the atmosphere | |
| | | | | (minimal value) | |
| lconst_z0 | L | .FALSE. | | TRUE: horizontally homogeneous roughness length | |
| | | | | z0 | |
| const_z0 | R | 0.001 | m | value for horizontally homogeneous roughness | lconst_z0=.TRUE. |
| | | | | length z0 | |
| ldiff_qi | L | .FALSE. | | Turbulent diffusion of cloud ice, if .TRUE. | · |
| itype_tran | I | 2 | | type of surface-atmosphere transfer | |
| lprfcor | L | .FALSE. | | using the profile values of the lowest main level | |
| | | | | instead of the mean value of the lowest layer for | |
| | | | | surface flux calculations | |
| lnonloc | L | .FALSE. | | nonlocal calculation of vertical gradients used for | |
| | | | | turbul. diff. | |
| lfreeslip | L | .FALSE. | | .TRUE.: use a free-slip lower boundary condition, | |
| | | | | i.e. neither momentum nor heat/moisture fluxes | |
| | | | | (use for idealized runs only!) | |
| lcpfluc | L | .FALSE. | | consideration of fluctuations of the heat capacity of | |
| | | | | air | |

Defined and used in: src/namelists/mo_turbdiff_nml.f90

$3.34 \quad vdiff_nml$

| Parameter | Type | Default | Unit | Description | Scope |
|----------------|------|---------|------|--|-----------------|
| lsfc_mon_flux | L | .TRUE. | | Switch on surface momentum flux. | lvdiff = .TRUE. |
| lsfc_heat_flux | L | .TRUE. | | Switch on surface sensible and latent heat flux. | lvdiff = .TRUE. |

Defined and used in: src/namelists/mo_vdiff_nml.f90

4 Ocean-specific namelist parameters

$4.1 \quad ocean_physics_nml$

| Parameter | Type | Default | Unit | Description | Scope |
|--------------------------|------|---------|------|-----------------------------------|-------|
| i_sea_ice | I | 1 | | 0: No sea ice, 1: Include sea ice | |
| | | | | .FALSE.: compute drag only | |
| richardson_factor_tracer | I | 0.5e-5 | m/s | | |
| richardson_factor_veloc | I | 0.5e-5 | m/s | | |
| l_constant_mixing | L | .FALSE. | | | |

$4.2 \quad sea_ice_nml \; (relevant \; if \; run_nml/iforcing = 2 \; (ECHAM))$

| Parameter | Type | Default | Unit | Description | Scope |
|--------------|------|---------|------|---|-----------------------------|
| i_ice_therm | I | 2 | | Switch for thermodynamic model: | In an ocean run |
| | | | | 1: Zero-layer model | $i_{sea_ice must be} >= 1.$ |
| | | | | 2: Two layer Winton (2000) model | In an atmospheric run |
| | | | | 3: Zero-layer model with analytical forcing (for | the ice surface type must |
| | | | | diagnostics) | be defined. |
| | | | | 4: Zero-layer model for atmosphere-only runs (for | |
| | | | | diagnostics) | |
| i_ice_dyn | I | 0 | | Switch for sea-ice dynamics: | |
| | | | | 0: No dynamics | |
| | | | | 1: FEM dynamics (from AWI) | |
| i_ice_albedo | I | 1 | | Switch for albedo model. Only one is implemented | |
| | | | | so far. | |
| i_Qio_type | I | 2 | | Switch for ice-ocean heat-flux calculation method: | Defaults to 1 when |
| | | | | 1: Proportional to ocean cell thickness (like | i_ice_dyn=0 and 2 |
| | | | | MPI-OM) | otherwise. |
| | | | | 2: Proportional to speed difference between ice and | |
| | | | | ocean | |
| kice | I | 1 | | Number of ice classes (must be one for now) | |
| hnull | R | 0.5 | m | Hibler's h_0 parameter for new-ice growth. | |

| Parameter | Type | Default | Unit | Description | Scope |
|-----------|------|---------|------|---|-------|
| hmin | R | 0.05 | m | Minimum sea-ice thickness allowed. | |
| ramp_wind | R | 10 | days | Number of days it takes the wind to reach correct | |
| | | | | strength. Only used at the start of an | |
| | | | | OMIP/NCEP simulation (not after restart). | |

5 Namelist parameters for testcases (NAMELIST_ICON)

The ICON model code includes several experiments, so-called test cases, for the shallow water model as well as the 3-dimensional atmosphere. Depending on the specified experiment, initial conditions and boundary conditions are computed internally.

5.1 ha_testcase_nml (Scope: ltestcase=.TRUE. and iequations=[0,1,2] in run_nml)

| Parameter | Type | Default | Unit | Description | Scope |
|------------|------|---------|------|--|---------------------------|
| ctest_name | С | 'JWw' | | Name of test case: | |
| | | | | 'SW_GW': gravity wave | lshallow_water=.TRUE. |
| | | | | 'USBR': unsteady solid body rotation | lshallow_water=.TRUE. |
| | | | | 'Will_2': Williamson test 2 | lshallow_water=.TRUE. |
| | | | | 'Will_3': Williamson test 3 | $lshallow_water=.TRUE.$ |
| | | | | 'Will_5': Williamson test 5 | $lshallow_water=.TRUE.$ |
| | | | | 'Will_6': Williamson test 6 | $lshallow_water=.TRUE.$ |
| | | | | 'GW': gravity wave (nlev=20 only!) | lshallow_water=.FALSE. |
| | | | | 'LDF': local diabatic forcing test without physics | lshallow_water=.FALSE. |
| | | | | | and iforcing=4 |
| | | | | 'LDF-Moist': local diabatic forcing test with | lshallow_water=.FALSE., |
| | | | | physics initalised with zonal wind field | and iforcing=5 |
| | | | | 'HS': Held-Suarez test | $lshallow_water=.FALSE.$ |
| | | | | 'JWs': Jablonowski-Will. steady state | $lshallow_water=.FALSE.$ |
| | | | | 'JWw': Jablonowski-Will. wave test | lshallow_water=.FALSE. |
| | | | | 'JWw-Moist': Jablonowski-Will. wave test | lshallow_water=.FALSE. |
| | | | | including moisture | |
| | | | | 'APE': aqua planet experiment | $lshallow_water=.FALSE.$ |
| | | | | 'MRW': mountain induced Rossby wave | $lshallow_water=.FALSE.$ |

| Parameter | Type | Default | Unit | Description | Scope |
|---------------------|------|-----------|------|---|---------------------------|
| | | | | 'MRW2': modified mountain induced Rossby wave | lshallow_water=.FALSE. |
| | | | | 'PA': pure advection | $lshallow_water=.FALSE.$ |
| | | | | 'SV': stationary vortex | lshallow_water=.FALSE., |
| | | | | | ntracer = 2 |
| | | | | 'DF1': deformational flow test 1 | |
| | | | | 'DF2': deformational flow test 2 | |
| | | | | 'DF3': deformational flow test 3 | |
| | | | | 'DF4': deformational flow test 4 | |
| | | | | 'RH': Rossby-Haurwitz wave test | lshallow_water=.FALSE. |
| rotate_axis_deg | R | 0.0 | deg | Earth's rotation axis pitch angle | ctest_name= 'Will_2', |
| | | | | | 'Will_3', 'JWs', 'JWw', |
| | | | | | 'PA', 'DF1234' |
| gw_brunt_vais | R | 0.01 | 1/s | Brunt Vaisala frequency | ctest_name= 'GW' |
| gw_u0 | R | 0.0 | m/s | zonal wind parameter | ctest_name= 'GW' |
| gw_lon_deg | R | 180.0 | deg | longitude of initial perturbation | ctest_name= 'GW' |
| gw_lat_deg | R | 0.0 | deg | latitude of initial perturbation | ctest_name= 'GW' |
| jw_uptb | R | 1.0 | m/s | amplitude of the wave pertubation | ctest_name= 'JWw' |
| | | | (?) | | |
| mountctr_lon_deg | R | 90.0 | deg | longitude of mountain peak | ctest_name= 'MRW(2)' |
| mountctr_lat_deg | R | 30.0 | deg | latitude of mountain peak | ctest_name= 'MRW(2)' |
| mountctr_height | R | 2000.0 | m | mountain height | ctest_name= 'MRW(2)' |
| mountctr_half_width | R | 1500000.0 | m | mountain half width | ctest_name= 'MRW(2)' |
| mount_u0 | R | 20.0 | m/s | wind speed for MRW cases | ctest_name= 'MRW(2)' |
| rh_wavenum | I | 4 | | wave number | ctest_name= 'RH' |
| rh_init_shift_deg | R | 0.0 | deg | pattern shift | ctest_name= 'RH' |
| ihs_init_type | I | 1 | | Choice of initial condition for the Held-Suarez test. | ctest_name= 'HS' |
| | | | | 1: the zonal state defined in the JWs test case; | |
| | | | | other integers: isothermal state (T=300 K, | |
| | | | | ps=1000 hPa, u=v=0.) | |
| lhs_vn_ptb | L | .TRUE. | | Add random noise to the initial wind field in the | ctest_name= 'HS' |
| | | | , | Held-Suarez test. | |
| hs_vn_ptb_scale | R | 1. | m/s | Magnitude of the random noise added to the initial | ctest_name= 'HS' |
| | | | | wind field in the Held-Suarez test. | |

| Parameter | Type | Default | Unit | Description | Scope |
|-----------------|----------------|---------|------|---|--------------------|
| lrh_linear_pres | L | .FALSE. | | Initialize the relative humidity using a linear | ctest_name= |
| | | | | function of pressure. | 'JWw-Moist','APE', |
| | | | | | 'LDF-Moist' |
| rh_at_1000hpa | R | 0.75 | | relative humidity | ctest_name= |
| | | | | 0,1 | 'JWw-Moist','APE', |
| | | | | at 1000 hPa | 'LDF-Moist' |
| linit tracer fv | L | .TRUE. | | Finite volume initialization for tracer fields | ctest name='PA' |
| ape sst case | \overline{C} | 'sst1' | | SST distribution selection | ctest name='APE' |
| ' | | | | 'sst1': Control experiment | _ |
| | | | | 'sst2': Peaked experiment | |
| | | | | 'sst3': Flat experiment | |
| | | | | 'sst4': Control-5N experiment | |
| | | | | 'sst_qobs': Qobs SST distribution exp | |
| | | | | 'sst_ice': Control SST distribution with -1.8 C | |
| | | | | above 64 N/S . | |
| ildf_init_type | I | 0 | | Choice of initial condition for the Local diabatic | ctest_name= 'LDF' |
| | | | | forcing test. 1: the zonal state defined in the JWs | |
| | | | | test case; other: isothermal state (T=300 K, | |
| | | | | ps=1000 hPa, u=v=0.) | |
| ldf_symm | $\mid L$ | .TRUE. | | Shape of local diabatic forcing: | ctest_name= |
| | | | | .TRUE.: local diabatic forcing symmetric about the | 'LDF','LDF-Moist' |
| | | | | equator (at 0 N) | |
| | | | | .FALSE.: local diabatic forcing asym. about the | |
| | | | | equator (at 30 N) | |

Defined and used in: src/testcases/mo_ha_testcases.f90

$5.2 \quad nh_testcase_nml \; (Scope: \; ltestcase=.TRUE. \; and \; iequations=3 \; in \; run_nml)$

| Parameter | Type | Default | Unit | Description | Scope |
|--------------|------|---------|------|----------------------|-------|
| nh_test_name | С | 'jabw' | | testcase selection | |
| | | | | 'zero': no orography | |

| Parameter | Type | Default | Unit | Description | Scope |
|-----------|------|---------|------|--|-------------------------------------|
| | | | | 'bell': bell shaped mountain at 0E,0N | |
| | | | | 'schaer': hilly mountain at 0E,0N | |
| | | | | 'jabw': Initializes the full Jablonowski Williamson | |
| | | | | test case. | |
| | | | | 'jabw s': Initializes the Jablonowski Williamson | |
| | | | | steady state test case. | |
| | | | | ' jabw m': Initializes the Jablonowski Williamson | |
| | | | | test case with a mountain instead of the wind | |
| | | | | perturbation (specify mount_height). | |
| | | | | 'mrw nh': Initializes the full Mountain-induced | |
| | | | | Rossby wave test case. | |
| | | | | 'mrw2 nh': Initializes the modified | |
| | | | | mountain-induced Rossby wave test case. | |
| | | | | 'mwbr const': Initializes the mountain wave with | |
| | | | | two layers test case. The lower layer is isothermal | |
| | | | | and the upper layer has constant brunt vaisala | |
| | | | | frequency. The interface has constant pressure. | |
| | | | | 'PA': Initializes the pure advection test case. | |
| | | | | 'HS_nh': Initializes the Held-Suarez test case. At | |
| | | | | the moment with an isothermal atmosphere at rest | |
| | | | | (T=300K, ps=1000hPa, u=v=0, topography=0.0). | |
| | | | | 'HS_jw': Initializes the Held-Suarez test case with | |
| | | | | Jablonowski Williamson initial conditions and zero | |
| | | | | topography. | |
| | | | | 'APE_nwp, APE_echam, APE_nh, | |
| | | | | APEc_nh, ': Initializes the APE experiments. | |
| | | | | With the jabw test case, including moisture. | |
| | | | | 'wk82': Initializes the Weisman Klemp test case | $l_{\text{limited_area}} = .TRUE.$ |
| | | | | 'g_lim_area': Initializes a series of general | |
| | | | | limited area test cases: itype_atmos_ana | |
| | | | | determines the atmospheric profile, | |
| | | | | itype_anaprof_uv determines the wind profile and | |
| | | | | itype topo and determines the topography | |

| Parameter | Type | Default | Unit | Description | Scope |
|----------------------|------|-----------|------|--|--|
| | | | | 'dcmip_pa_12': Initializes Hadley-like | |
| | | | | meridional circulation pure advection test case. | |
| | | | | 'dcmip_rest_200': atmosphere at rest test | lcoriolis = .FALSE. |
| | | | | (Schaer-type mountain) | |
| | | | | 'dcmip_mw_2x': nonhydrostatic mountain | lcoriolis = .FALSE. |
| | | | | waves triggered by Schaer-type mountain | |
| | | | | 'dcmip_gw_31': nonhydrostatic gravity waves | |
| | | | | triggered by a localized perturbation (nonlinear) | |
| | | | | 'dcmip_gw_32': nonhydrostatic gravity waves | l_limited_area =.TRUE. |
| | | | | triggered by a localized perturbation (linear) | and lcoriolis = .FALSE. |
| | | | | 'dcmip_tc_51': tropical cyclone test case with | lcoriolis = .TRUE. |
| | | | | 'simple physics' parameterizations (not yet implemented) | |
| | | | | 'dcmip tc 52': tropical cyclone test case with | lcoriolis = .TRUE. |
| | | | | with full physics in Aqua-planet mode | icorions — . Tito E. |
| | | | | 'CBL': convective boundary layer simulations for | is plane torus= .TRUE. |
| | | | | LES package on torus (doubly periodic) grid | is_plane_torus :1100E. |
| jw_up | R | 1.0 | m/s | amplitude of the u-perturbation in jabw test case | nh_test_name='jabw' |
| u0 mrw | R | 20.0 | m/s | wind speed for mrw(2) and mwbr const cases | $ \begin{array}{ccc} & \text{nh} & \text{test} & \text{name} = \\ & \text{nh} & \text{test} & \text{name} = \\ \end{array} $ |
| _ | | | , | _ | $\operatorname{mrw}(2)$ nh' and |

8 Information on vertical level distribution

If no vertical sleve coordinate is chosen (ivctype / =2), the hydrostatic and nonhydrostatic models need hybrid vertical level information to generate the terrain following coordinates. The hybrid level specification is stored in <icon home>/hyb_params/HYB_PARAMS_<nlev>. The hydrostatic model assumes to get pressure based coordinates, the nonhydrostatic model expects height based coordinates. For further information see <icon home>/hyb_params/README.

A Arithmetic expression evaluation

The mo_expression module evaluates basic arithmetic expressions specified by character-strings. It is possible to include mathematical functions, operators, and constants. An application of this module is the evaluation of arithmetic expressions povided as namelist parameters.

Besides, Fortran variables can be linked to the expression and used in the evaluation. The implementation supports scalar input variables as well as 2D and 3D fields.

From a users' point of view, the basic usage of this module is described in Section A.1 below. Technically, infix expressions are processed based on a Finite State Machine (FSM) and Dijkstra's shunting yard algorithm. A more detailed described of the Fortran interface is given in Section A.3.

A.1 Examples for arithmetic expressions

Basic examples:

• "sqrt(2.0)"

- "sin(45*pi/180.) * 10 + 5"
- "if(1. > 2, 99, -1.*pi)"
- "min(1,2)"

Variables are used with a bracket notation:

• "sqrt([u]^2 + [v]^2)"

Note that the use of variables requires that these are enabled ("linked") by the Fortran routine that calls the mo_expression module.

A.2 Expression syntax

A.2.1 List of functions

| name | #args | description |
|-----------------------|-------|---|
| log(), exp() | 1 | natural logarithm and its inverse function. |
| sin(), cos() | 1 | trigonometric functions |
| sqrt() | 1 | square root |
| min(), max() | 2 | minimum and maximum of two values |
| if(value, then, else) | 3 | conditional expression (value > 0.) |

A.2.2 List of operators

| name | evaluates to | |
|---------------|--|--|
| a + b, a - b, | (a+b), (a-b), (a*b), (a/b) | |
| a * b, a / b | | |
| a ^ b | a^b | |
| a > b | $\begin{cases} 1, & \text{if } a > b, \\ 0, & \text{otherwise.} \end{cases}$ | |
| a < b | $\begin{cases} 1, & \text{if } a < b, \\ 0, & \text{otherwise.} \end{cases}$ | |

A.2.3 List of available constants

| name of constant | assigned value | description |
|------------------|-----------------------|--|
| pi | 4 atan(1) | mathematical constant equal to a circle's cir- |
| | | cumference divided by its diameter |
| r | $6.371229 \cdot 10^6$ | Earth's radius ¹ |

A.3 Usage with Fortran

The minimal Fortran interface is as follows:

- 1. The TYPE expression which is initialized with the character-string that specifies the arithmetic expression.
- 2. The type-bound procedure evaluate(), which returns the result (scalar or array-shaped) as a POINTER.
- 3. The type-bound procedure link() connecting a variable to a name in the character-string expression.

A.3.1 Fortran examples

The following examples illustrate the arithmetic expression parser. The calls to DEALLOCATE the data structures have been ommitted for the sake of brevity:

1. Scalar arithmetic expression:

```
formula = expression("sin(45*pi/180.) * 10 + 5")
CALL formula%evaluate(val)
... use "val" for some purpose ...
```

2. Masking of a 2D array as an example for the link procedure:

```
formula = expression("if([z_sfc] > 2., [z_sfc], 0.)")
CALL formula%link("z_sfc", z_sfc)
CALL formula%evaluate(val_2D)
... use "val_2D(:,:)" for some purpose ...
```

A.3.2 Error handling

Invalid arithmetic expressions yield "empty" expression objects. When these are evaluated, a NULL() pointer is returned.

A successful expression evaluation can be tested with the err_no variable:

```
IF (formula%err_no == ERR_NONE) THEN
END IF
```

In case of error, the err_no variable also provides the reason for the aborted evaluation process.

A.4 Remarks

- Variable names are treated case-sensitive!
- For 3D array input it is implicitly assumed that 2D fields are embedded in 3D fields as "3D(:,level,:) = 2D(:,:)".

Changes incompatible with former versions of the model code

 $\begin{array}{c} var_names_map_file,\ out_varnames_map_file\\ 2013-04-25 \end{array}$ 12016

- $\bullet \ \operatorname{Renamed} \ \mathbf{var} \underline{\quad} \mathbf{names} \underline{\quad} \mathbf{map} \underline{\quad} \mathbf{file} \rightarrow \mathbf{output} \underline{\quad} \mathbf{nml} \underline{\quad} \mathbf{dict}.$
- ullet Renamed out varnames map file \to netcdf dict.
- The dictionary in netcdf dict is now reversed, s.t. the same map file as in output nml dict can be used to translate variable names to the ICON internal names and back.

output nml: namespace

 $2013 - 0\overline{4} - 26$ Date of Change:

12051

¹This number seems to be based on Hayford's 1910 estimate of the Earth. It is used in ICON as well as MPAS and was almost certainly taken from the Jablonowski and Williamson test case (QJRMS, 2006).

• Removed obsolete namelist variable namespace from output_nml.

 $\begin{array}{ll} \textit{Change:} & \text{gribout_nml: generatingCenter, generatingSubcenter} \\ \textit{Date of Change:} & 2013\text{-}04\text{-}26 \\ \textit{Revision:} & 12051 \end{array}$

- Introduced new namelist variables generatingCenter and generatingSubcenter.
- If not set explicitly, center and subcenter information is copied from the input grid file

Change:radiation_nml: albedo_typeDate of Change:2013-05-03Revision:12118

- $\bullet\,$ Introduced new namelist variable ${\bf albedo_type}$
- If set to 2, the surface albedo will be based on the MODIS data set.

Change:initicon_nml: dwdinc_filenameDate of Change:2013-05-24Revision:12266

 \bullet Renamed dwdinc_filename to dwdana_filename

Change:initicon_nml: l_ana_sfcDate of Change:2013-06-25Revision:12582

 \bullet Introduced new namelist flag l_ana_sfc

• If true, soil/surface analysis fields are read from the analysis fiel dwdfg filename. If false, surface analysis fields are not read. Soil and surface are initialized with the first guess instead.

Change: new_nwp_phy_tend_list: output names consistent with variable names

Date of Change: 2013-06-25

12590

- temp tend radlw \rightarrow ddt temp radlw
- temp tend turb \rightarrow ddt temp turb
- temp tend $drag \rightarrow ddt$ temp drag

 $\begin{array}{ll} \textit{Change:} & \text{prepicon_nml, remap_nml, input_field_nml} \\ \textit{Date of Change:} & 2013\text{-}06\text{-}25 \\ \textit{Revision:} & 12597 \end{array}$

- Removed the sources for the "prepicon" binary!
- The "prepicon" functionality (and most of its code) has become part of the ICON tools.

 \bullet The number of vertical input levels is now read from file. The namelist parameter ${\bf nlev_in}$ has become obsolete in r12700 and has been removed.

• The namelist parameter exch msgsize has been removed together with the option iorder sendrecv=4.

 $\begin{array}{ll} {\it Change:} & {\it parallel_nml} \\ {\it Date of Change:} & {\it 2013-08-14} \\ {\it Revision:} & {\it 14164} \end{array}$

• The namelist parameter **use_sp_output** has been replaced by an equivalent switch **use_dp_mpi2io** (with an inverse meaning, i.e. we have use dp mpi2io = .NOT. use sp_output).

 $\begin{array}{ll} \textit{Change:} & \text{parallel_nml} \\ \textit{Date of Change:} & \textbf{2013-08-15} \\ \textit{Revision:} & \textbf{14175} \end{array}$

• The above-mentioned namelist parameter use dp mpi2io got the default .FALSE. By this, the output data are sent now in single precision to the output processes.

Change:initicon_nml: l_ana_sfcDate of Change:2013-10-21Revision:14280

• The above-mentioned namelist parameter l ana sfc has been replaced by lread ana. The default is set to .TRUE., meaning that analysis fields are required and read on default. With Iread ana=.FALSE. ICON is able to start from first guess fields only.

Change:output_nml:lwrite_ready, ready_directoryDate of Change:2013-10-25Revision:14391

• The namelist parameters lwrite_ready and ready_directory have been replaced by a single namelist parameter ready_file, where ready_file /= 'default' enables writing ready files.

• Different output_nml's may be joined together to form a single ready file event - they share the same ready_file.

Change:output_nml: output_boundsDate of Change:2013-10-25Revision:14391

 $\bullet \ \ \text{The namelist parameter } \mathbf{output_bounds} \ \text{specifies a start}, \ \text{end}, \ \text{and increment of output invervals}. \ \ \text{It does no longer allow multiple}$ triples.

Change:output_nml: steps_per_fileDate of Change:2013-10-30Revision:14422

 \bullet The default value of the namelist parameter ${\bf steps_per_file}$ has been changed to -1.

 $\begin{array}{ll} \textit{Change:} & \text{run_nml} \\ \textit{Date of Change:} & \textbf{2013-11-13} \\ \textit{Revision:} & \textbf{14759} \end{array}$

- The dump/restore functionality for domain decompositions and interpolation coefficients has been removed from the model code. This means, that the parameters
 - ldump_states,
 - lrestore_states,
 - ldump_dd,
 - lread_dd,
 - nproc_dd,
 - dd_filename,
 - dump_filename,

```
- l_one_file_per_patch
```

have been removed together with the corresponding functionality from the ICON model code.

 $\begin{array}{ll} \textit{Change:} & \text{output_nml: filename_format} \\ \textit{Date of Change:} & \textbf{2013-12-02} \\ \textit{Revision:} & \textbf{15068} \end{array}$

• The string token <ddhhmmss> is now substituted by the relative day-hour-minute-second string, whereas the absolute date-time stamp can be inserted using <datetime>.

 $\begin{array}{ll} {\it Change:} & {\it output_nml: ready_file} \\ {\it Date of Change:} & {\it 2013-12-03} \\ {\it Revision:} & {\it 15081} \end{array}$

• The ready file name has been changed and may now contain string tokens cpath>, <datetime>, <ddhmmss> which are substituted as described for the namelist parameter filename_format.

 $\begin{array}{ll} \textit{Change:} & \text{interpl_nml: rbf_vec_scale_ll} \\ \textit{Date of Change:} & \textbf{2013-12-06} \end{array}$

15156

- The real-valued namelist parameter rbf_vec_scale_11 has been removed.
- Now, there exists a new integer-valued namelist parameter, rbf_scale_mode_11 which specifies the mode, how the RBF shape parameter is determined for lon-lat interpolation.

- Removed remaining vlist-related namelist parameter. This means that the parameters
 - $\ {\rm out_file type}$
 - out expname
 - dt data
 - dt file
 - lwrite_dblprec, lwrite_decomposition, lwrite_vorticity, lwrite_divergence, lwrite_pres, lwrite_z3, lwrite_tracer, lwrite_tend_phy, lwrite_radiation, lwrite_precip, lwrite_cloud, lwrite_tke, lwrite_surface, lwrite_omega, lwrite_initial, lwrite_oce_timestepping

are no longer available.

 Change:
 gridref_nml

 Date of Change:
 2014-01-07

 Revision:
 15436

• Changed namelist defaults for nesting: grf_intmethod_e, 1_mass_consvcorr, 1_density_nudging.

 $\begin{array}{ll} \textit{Change:} & \text{interpol_nml} \\ \textit{Date of Change:} & \textbf{2014-02-10} \\ \textit{Revision:} & \textbf{16047} \end{array}$

• Changed namelist default for rbf_scale_mode_ll: The RBF scale factor for lat-lon interpolation is now determined automatically by default.

 $\begin{array}{ll} \textit{Change:} & \text{echam_phy_nml} \\ \textit{Date of Change:} & 2014\text{-}02\text{-}27 \\ \textit{Revision:} & 16313 \end{array}$

• Replace the logical switch lcover by the integer switch icover that is used in ECHAM-6.2. Values are transferred as follows: .FALSE. = 1 (=default), .TRUE. = 2.

• Change constant minimum vertical diffusion coefficients to variable ones proportional to $1/\sqrt{Ri}$ for inwportional to $1/\sqrt$ time the defaults for tkhmin and tkmmin are increased from $0.2 \,\mathrm{m}^2/\mathrm{s}$ to $0.75 \,\mathrm{m}^2/\mathrm{s}$.

 $\begin{array}{ll} \textit{Change:} & \text{nwp_phy_nml} \\ \textit{Date of Change:} & 2014\text{-}03\text{-}13 \\ \textit{Revision:} & 16560 \end{array}$

• Removed namelist parameter dt_ccov, since practically it had no effect. For the quasi-operational NWP-setup, the calling frequency of the cloud cover scheme is the same as that of the convection scheme. I.e. both are synchronized.

 Change:
 nwp_phy_nml

 Date of Change:
 2014-03-24

 Revision:
 16668

• Changed namelist default for **itype z0**: use land cover related roughness only (itype_z0=2).

Change:nonhydrostatic_nmlDate of Change:2014-05-16Revision:17293

• Removed switch for vertical TKE advection in the dynamical core (lvadv tke). TKE advection has been moved into the transport scheme and can be activated with iadv_tke=1 in the transport_nml.

 $\begin{array}{ll} {\it Change:} & {\it nonhydrostatic_nml} \\ {\it Date of Change:} & {\it 2014-05-27} \\ {\it Revision:} & {\it 17492} \end{array}$

• Removed namelist parameter model_restart_info_filename in namelist master_model_nml.

 $\begin{array}{ll} {\it Change:} & {\it transport_nml} \\ {\it Date~of~Change:} & {\it 2014-06-05} \\ {\it Revision:} & {\it 17654} \end{array}$

• Changed namelist default for itype_hlimit from monotonous limiter (3) to positive definite limiter (4).

 $\begin{array}{ll} \textit{Change:} & \text{nh_pzlev_nml} \\ \textit{Date of Change:} & 2014\text{-}08\text{-}28 \\ \textit{Revision:} & 18795 \end{array}$

• Removed namelist nh_pzlev_nml. Instead, each output namelist specifies its separate list of p_levels, h_levels, and i_levels.

Change:nonhydrostatic_nmlDate of Change:2014-10-27Revision:19670

• Removed namelist parameter l_nest_rcf in namelist nonhydrostatic_nml.

Change:nonhydrostatic_nmlDate of Change:2014-11-24Revision:20073

• Removed namelist parameter iadv_rcf in namelist nonhydrostatic_nml. The number of dynamics substeps per advective step are now specified via ndyn_substeps. The meaning of run_nml:dtime has changed and denotes the advective time step.

 $\begin{array}{ll} {\it Change:} & {\it io_nml} \\ {\it Date of Change:} & {\it 2015-03-25} \\ {\it Revision:} & {\it 21501} \end{array}$

• Namelist parameter lzaxis_reference is deprecated and has no effect anymore. However, users are not forced to modify their scripts instantaneously: lzaxis_reference=.FALSE. is still a valid namelist setting, but it has no effect and a warning will be issued. lzaxis_reference finally removed in r24606.

Change: limarea_nml
Date of Change: 2016-02-08
Revision: 26390

• Namelist parameter dt_latbc has been removed. Its value is now identical to the namelist parameter dtime_latbc.

 $\begin{array}{ll} \textit{Change:} & \text{interpol_nml} \\ \textit{Date of Change:} & 2016\text{-}02\text{-}11 \\ \textit{Revision:} & 26423 \end{array}$

 \bullet Namelist parameter <code>l_intp_c21</code> is deprecated and has no effect anymore.
